practical knowledge to understand the process and decision making in the digitization of flat media. Instead of having to learn by trial and error, they will get a well rounded education of the practical aspects of digitization and have a better understanding of their options. This is the stuff they don't teach you in school. People can be lured into thinking that all it takes to digitize something is a scanner and some metadata. This guide illustrates the practical aspects of digitization such as the physical challenges of scanning books without cutting the spine, the differences between a scanner that uses a scanning head vs a scanner that uses a camera, the different options for workflow for digitized items and the reasons for choosing one scanner over another for reasons other than price. *Digitizing Flat Media: Principles and Practices* is intended to give librarians and archivists the benefit of a seasoned digitization professional guiding them and helping them figure out exactly what needs to be done when.

Document Layout Analysis Showmik Bhowmik, 2023-07-31. Document layout analysis (DLA) is a crucial step towards the development of an effective document image processing system. In the early days of document image processing, DLA was not considered as a complete and complex research problem, rather just a pre-processing step having some minor challenges. The main reason for that is the type of layout being considered for processing was simple. Researchers started paying attention to this complex problem as they came across a large variety of documents. This book presents a clear view of the past, present, and future of DLA, and it also discusses two recent methods developed to address the said problem.

Software Product Lines Gary J. Chastek, 2003-08-02. Software product lines are emerging as an important new paradigm for software development. Product lines are enabling organizations to achieve impressive time-to-market gains and cost reductions. In 1997, we at the Software Engineering Institute (SEI) launched a Product Line Practice Initiative. Our vision was that product line development would be a low-risk, high-return proposition for

the entire software engineering community It was our hope from the beginning that there would eventually be sufficient interest to hold a conference The First Software Product Line Conference SPLC1 was the realization of that hope Since SPLC1 we have seen a growing interest in software product lines Companies are launching their own software product line initiatives product line technical and business practices are maturing product line tool vendors are emerging and books on product lines are being published Motivated by the enthusiastic response to SPLC1 and the increasing number of software product lines and product line researchers and practitioners the SEI is proud to sponsor this second conference dedicated to software product lines We were gratified by the submissions to SPLC2 from all parts of the globe from government and commercial organizations From these submissions we were able to assemble a rich and varied conference program with unique opportunities for software product line novices experts and those in between This collection represents the papers selected from that response and includes research and experience reports
