Human Stem Cell Toxicology James L

Sherley, 2016-08-09 Toxicity against tissue stem cells TSCs is a major problem in drug development and environmental health science Despite their essential function in all human cellular tissues the nature of tissue stem cells is not fully understood The small fraction of stem cells in tissues and the lack of specific biomarkers for their quantification present a formidable challenge to developing tools for their study and assays that can identify stem cell toxic agents Human Stem Cell Toxicology reveals TSC toxicity as a biomedical reality that is now well under siege by newly emerging ideas and technologies despite these challenges Chapters consider stem cell toxicity by environmental agents pharmaceutical drug candidates and marketed therapeutic medicines with adverse side effects New insights to cellular molecular biochemical and chemical mechanisms of human tissue stem cell toxicity are brought together Experimental and theoretical treatments are of specific topics including approaches to monitoring TSC function newly discovered TSC types and TSC toxicity resistance mechanisms are covered by expert authors This book informs and champions the continued development of innovative technologies to predict the TSC toxicity of compounds before their use whether in patients or the environment by addressing emerging new cell based approaches and concepts for technical innovation This publication will be a useful reference for postgraduate students and researchers working in toxicology pharmaceutical science tissue cell biology and stem cell biology

Formaldehyde

Luoping Zhang, 2018-05-24 Formaldehyde is virtually ubiquitous in the modern environment due to its cost effective nature its use in resin formation and its preservative properties Though formaldehyde is necessary for many products and processes important to the world's economy this economic dependence on formaldehyde comes at a cost to public health Growth and consequent industrialization rely heavily on formaldehyde use New buildings residences public places and offices are not only built with timber preserved by formaldehyde but they are also furnished with wood wool and textile products that contain formaldehyde The general population faces environmental exposure from indoor and outdoor air pollution food and even medicine Scientific inquiry into formaldehyde exposure has grown in response This book consolidates the new and established body of formaldehyde research in the scholarly community focusing on exposure genotoxicity and adverse health outcomes Through this resource we hope to increase awareness of the broad range of health effects posed by formaldehyde exposure and to encourage interdisciplinary interest as well as research into this pervasive compound especially in the United States and China where formaldehyde production and usage is high This book will be useful to researchers of environmental and occupational exposure students and government regulators and anyone exposed to formaldehyde in the

Cancer Neurology in Clinical Practice David Schiff, Isabel Arrillaga, Patrick Y. Wen, 2017-09-16 This updated edition provides clinicians from various backgrounds and levels of training the information needed to optimally diagnose and manage neurologic complications of the nervous system. Organized into seven sections, this comprehensive volume begins with an overview of diagnostic studies for neurologic complications involving the nervous system. That is followed by sections on metastatic and non-metastatic complications of cancer involving the nervous system and the interpretation, diagnosis, and management of common neuro-oncologic symptoms. The next section reviews the neurologic complications of cancer therapy, including corticosteroids, radiation therapy, chemotherapy, targeted molecular therapies, immunotherapies, hematopoietic stem cell transplantation, and infections involving the nervous system. The final section focuses on the most important neurologic complications in cancers arising from specific organs. In addition to capturing the latest advancements in the rapidly evolving fields of oncology and cancer neurology, the goal of this resource is to lead clinicians toward prompt diagnosis and intervention in order to improve patient quality of life. This textbook is a valuable resource for medical oncologists and radiation oncologists as well as neurologists and neuro-oncologists dealing with these patients. Overall, the chapters are well organized, clearly written, fairly balanced, and reasonably up to date. I would recommend it as a learning tool to physicians in training, medical students, residents, and fellows, and for more experienced physicians as both a review, update, and a way to gain more in-depth knowledge and insight into the neurologic problems of cancer patients.
