Smart Technology Applications in Water Management Tamim Younos, June-seok Lee, Tammy E. Parece, 2025-07-01 This book reviews the latest advances and practical applications of smart technologies applied to water resource management. Bridging environmental chemistry, engineering, and information technology, the book offers a multidisciplinary perspective on how digital innovations are reshaping water monitoring, infrastructure diagnostics, and decision-making processes. Chapters by expert contributors cover topics such as the applications of machine learning for drinking water pipeline replacement, geospatial technologies, satellite and remote sensing technologies, Internet of Things (IoT), cybersecurity, robotics in water monitoring, and artificial intelligence. Particular attention is given to the applications in real-time modelling of flood forecasting in urban drainage systems and the implementation of smart water networks. With detailed case studies and industry insights, this book highlights practical implementations such as smart water networks, optimal sensor deployment, and AI-driven service line material detection. Given its breadth, the book is a valuable resource for researchers, scholars, and students and serves as a roadmap for water resource engineers and planners tackling water security and diverse water resources portfolios.
