Understanding the Globalization of Intelligence A. Svendsen, 2012-08-30 In this concise introduction to the complexities of contemporary western intelligence and its dynamics during an era of globalization Adam Svendsen discusses intelligence cooperation in the early 21st century with a sharp focus on counter terrorism and WMD counter proliferation during the War on Terror **Federal Register**, 2014

Power and Progress on the Prairie Thomas Biolsi, 2018-05-22 A critical exploration of how modernity and progress were imposed on the people and land of rural South Dakota The Rosebud Country comprising four counties in rural South Dakota was first established as the Rosebud Indian Reservation in 1889 to settle the Sicangu Lakota During the first two decades of the twentieth century white homesteaders arrived in the area and became the majority population Today the population of Rosebud Country is nearly evenly divided between Indians and whites In Power and Progress on the Prairie Thomas Biolsi traces how a variety of governmental actors including public officials bureaucrats and experts in civil society invented and applied ideas about modernity and progress to the people and the land Through a series of case studies programs to settle surplus Indian lands to civilize the Indians to modernize white farmers to find strategic sites for nuclear missile silos and to extend voting rights to Lakota people Biolsi examines how these various problems came into focus for government experts and how remedies were devised and implemented Drawing on theories of governmentality derived from Michel Foucault Biolsi challenges the idea that the problems identified by state agents and the solutions they implemented were inevitable or rational Rather through fine grained analysis of the impact of these programs on both the Lakota and white residents he reveals that their underlying logic was too often arbitrary and devastating

Electric Flight Technology Ravi Rajamani, 2018-05-28 The environmental impact of hydrocarbon burning aircraft is one of the main motivations for the move to electric propulsion in aerospace Also cars buses and trucks are incorporating electric or hybrid electric propulsion systems reducing the pressure on hydrocarbons and lowering the costs of electrical components The economies of scale necessitated by the automotive industry will help contain costs in the aviation sector as well The use of electric propulsion in airplanes is not a new phenomenon However it is only recently that it has taken off in a concrete manner with a viable commercial future The Electric Flight Technology Unfolding of a New Future reviews the history of this field discusses the key underlying technologies and describes how the future for these technologies will likely unfold distinguishing between all electric AE and hybrid electric HE architectures Written by Dr Ravi Rajamani it covers the essential information needed to understand this new technology wave taking hold in the aerospace industry The Electric Flight Technology Unfolding of a New Future covers fundamental topics such as The history of electric propulsion including its evolution from using traditional electricity to solar power to batteries as sources to sustain propulsion and flight The various architectures being considered for electric aircraft specifically small general aviation GA aircraft and larger business jets single aisle commercial aircraft and larger twin aisle commercial aircraft The various

systems and subsystems of an electric aircraft along with how various subsystems in the vehicle can be integrated in a more optimal manner In the future the existing tube and wing configuration will not be the only available architecture instead we will be more likely to find an architecture where the propulsion system is embedded within the airframe The future trends in this arena and what we can expect to see in the next decade or so *Control Systems Engineering* Norman S.
