Essentials of Nucleic Acid Analysis Jacque T. Keer, Lyndsey Birch, 2008 An indispensable handbook of the highest standard for those working in the fields of food analysis and forensic applications The Forensic Science Service Great Britain: Parliament: House of Commons: Science and Technology Committee, 2011-07 The Science and Technology Committee is not confident that an orderly transition can be achieved by the extremely challenging deadline for closure of the Forensic Science Service of March 2012 Extending the deadline by at least six months would allow the government to consult on and determine a wider strategy for forensic science In making its decision to close the FSS the government failed to give enough consideration to the impact on forensic science research and development the capacity of private providers to absorb the FSS's 60% market share and the wider implications for the criminal justice system These considerations appear to have been hastily overlooked in favour of the financial bottom line The report also draws attention to the historical inadequacies in government decision making that brought the FSS to its current financial situation The FSS's dire financial position appears to have arisen from a complex combination of factors principally the shrinking forensics market driven by increasing police in sourcing of forensic science services and a forensic procurement framework that has driven down prices and does not adequately recognise the value of complex forensic services In the transition to closure transferring work from the FSS to a non accredited police or private laboratory would be highly undesirable posing significant and unacceptable risks to criminal justice Proposals should be brought forward immediately to provide the Forensic Science Regulator with statutory powers to enforce compliance with quality standards Total Sustainability in the Built Environment Alison Cotgrave, Mike Riley, 2012-12-06 The first textbook in sustainable construction bringing

together the whole range of topics from planning through to facilities management in an accessible and engaging way and complete with illustrations and photographs Written by experts and including real world case studies this book can be used as a core text or across several modules The book begins with planning issues after which each chapter charts the different stages of the construction process through to refurbishment of existing buildings This textbook is aimed at undergraduate Built Environment and Construction students or pre degree HND FD students in Architectural Technology and Architecture Building Surveying General Practice Surveying Urban Planning Property Management Quantity Surveying Construction Management Facilities Management and general programmes focussed on the environment It will also be of interest to professionals working for construction and property companies as there are so few resources that give a complete overview of sustainability in construction
