The Oxford Handbook of Cognitive Analytic Therapy Laura

Brummer, Marisol Cavieres, Ranil Tan, 2024-02-28 The Oxford Handbook of Cognitive Analytic Therapy presents a comprehensive guide to the cognitive analytic therapy CAT model. It balances established theory and practice alongside a focus on innovation in both direct work with clients and the application of CAT more broadly within teams, organizations, and training, and as a model for leadership. The volume includes a range of innovations in doing and using CAT which are directly applicable for those studying and working in health, social care, and private services across many specialties encompassing the entire lifespan. This includes child and adolescent services, working age through to older adults, individuals engaged with mental health services, and within forensic and prison populations, and those experiencing physical health and neurological difficulties both in community and inpatient settings. Given the social and dialogic origins of CAT, the book acknowledges the importance of the wider social, cultural, and political factors that can shape an individual's understanding of self and other, with chapters that both apply a CAT understanding to key issues such as racism and social context, and provide a critique to the extent in which CAT engages with these issues in practice. This volume also has a focus on professional standards and governance encompassing training, supervision, and a competency framework, and throughout the book, the editors have endeavoured to include clients' voices, including personal reflections, extracts from actual CATs, and co-produced chapters to ensure the book holds true to the collaborative nature of CAT.

Clinical Neuropsychology Mark E. Maruish, James A.

Moses, 2013-05-13 With the emergence of clinical neuropsychology as one of the fastest growing specialties in psychology comes the need for current and future practitioners to stay abreast of the most recent research. A number of professional journals more than adequately meet this need. But there is also a need to stay up to date on the current thinking about important problems. Drawing upon the expertise of leaders in the field, the editors' intent in this book was to provide the practitioner with a source for discussions of topics that are vital to their ongoing development as clinical neuropsychologists but that generally are not addressed in the literature to any great degree.

Willingham, Nancy S. Cole, 2013-12-16 There have been many important changes in the participation of women and men in American society over the past quarter century Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men They aid the learning process and reflect inequalities in opportunity to learn and participate In addition they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students educational programs and a wide range of issues For all of these reasons it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired The test performance of women and men is a research topic of historical interest and has received much attention in recent years Because of this increased interest there is a great deal of new research and data available The purpose of the study presented in this volume was to review this new information with two objectives in mind to clarify patterns of gender difference and similarity in test performance and related achievements and to see what implications those findings might have for fair assessment and as a corollary examine the assessment process as a possible source of gender differences This study is interested in tests used in education to assess developed knowledge and skill In order to gain a broader view of gender similarity and difference the contributors looked at other types of measures and other characteristics of young women and men Their hope is to contribute to a firmer basis for insuring fairness in tests an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience
