Volume 2: Cases and Perspectives M. Kathleen Heid, Glendon W. Blume, 2008-07-01 Published in Co operation with the National Council of Teacher of Mathematics According to NCTM s Principles and Standards for School Mathematics Technology is essential in teaching and learning of mathematics it influences the mathematics that is taught and it enhances students learning How does research inform this clarion call for technology in mathematics teaching and learning In response to the need to craft appropriate roles for technology in school mathematics new technological approaches have been applied to the teaching and learning of mathematics and these approaches have been examined by researchers world wide The second volume has a dual focus cases and perspectives It features descriptive cases that provide accounts of the development of technology intensive curriculum and tools In these cases the writers describe and analyze various roles that research played in their development work and ways in which research curriculum development and tool development can inform each other These thoughtful descriptions and analyses provide documentation of how this process can and does occur The remaining chapters in the second volume address research related issues and perspectives on the use of technology in the teaching and learning of mathematics The lessons learned from the research presented in these volumes are lessons about teaching and learning that can be applied more broadly than solely in technological settings Bahamian Students' Experiences with Mathematics in American Universities and Colleges Nikki Rochelle Cleare, 2011 This longitudinal qualitative multi case study examines the mathematical experiences of three Bahamian students pursuing science degrees in American universities and its relationship to their previous mathematical experiences in their Bahamian high schools Drawing on cultural psychology and sociocultural theories of learning this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics Of the three participants two have had to learn develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so Each of the cases also highlights some powerful constructs needed for success in mathematics and at least two emphasize making connections between concepts procedures manipulatives tools and multiple approaches when solving problems This study contributes to an emerging area of research on student persistence in college level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role importance of conceptual understanding and how to promote it The study makes visible some of the ways in which students post secondary experiences with mathematics are shaped by their perception of their mathematical preparation thus providing a basis for discussions of possible curricular change in the Bahamas It also suggests that issues such as confidence and school teacher expectations of students may play a role in the development of conceptual understanding **SAT Math Prep Course** Jeff Kolby, 2024-01-10 Comprehensive Prep for SAT Math Every year students pay 1 000 and more to test prep companies to

**Distributed Leadership** Alma Harris, 2009-03-17 Alma Harris The eld of school leadership is currently preoccupied with the idea of distributed leadership Few ideas it seems have provoked as much attention debate and controversy Whatever your position on distributed leadership and you cannot fail to have one it is irrefutable that distributed leadership has become the leadership idea of the moment Yet it is an idea that can be traced back as far as the mid 20s and possibly earlier So why the interest Part of the answer can be found in a move away from theorizing and empirical enquiry focused on the single leader This shift has undoubtedly been fuelled by structural changes within schools and across school systems that have resulted in tentative models or forms of leadership practice Evidence highlights how those cupying formal leadership positions are increasingly

recognizing the limitations of existing structural arrangements to secure organizational growth and transformation Fullan et al 2007 Harris et al 2008 Chapman et al 2008 As a consequence many heads and principals are actively restructuring realigning and redesigning leadership practice in their school Harris 2008 While the terminology to describe such changes varies the core principle is one of extending or sharing leadership practice While scholars have long argued for the need to move beyond those at the top of organizations in order to examine leadership Barnard 1968 Katz and Kahn 1966 until relatively recently much of the school leadership literature has tended to focus upon the head or the principal
