Essential Mechanics - Statics and Strength of Materials with MATLAB and Octave P. Venkataraman, 2020-01-07 Essential Mechanics Statics and Strength of Materials with MATLAB and Octave combines two core engineering science courses Statics and Strength of Materials in mechanical civil and aerospace engineering It weaves together various essential topics from Statics and Strength of Materials to allow discussing structural design from the very beginning The traditional content of these courses are reordered to make it convenient to cover rigid body equilibrium and extend it to deformable body mechanics The e book covers the most useful topics from both courses with computational support through MATLAB Octave The traditional approach for engineering content is emphasized and is rigorously supported through graphics and analysis Prior knowledge of MATLAB is not necessary Instructions for its use in context is provided and explained It takes advantage of the numerical symbolic and graphical capability of MATLAB for

effective problem solving This computational ability provides a natural procedure for What if exploration that is important for design The book also emphasizes graphics to understand learn and explore design The idea for this book the organization and the flow of content is original and new The integration of computation and the marriage of analytical and computational skills is a new valuable experience provided by this e book Most importantly the book is very interactive with respect to the code as it appears along with the analysis Handbook of Industrial Polyethylene and Technology Mark A. Spalding, Ananda Chatterjee, 2017-10-12 This handbook provides an exhaustive description of polyethylene The 50 chapters are written by some of the most experienced and prominent authors in the field providing a truly unique view of polyethylene The book starts with a historical discussion on how low density polyethylene was discovered and how it provided unique opportunities in the early days New catalysts are presented and show how they created an expansion in available products including linear low density polyethylene high density polyethylene copolymers and polyethylene produced from metallocene catalysts With these different catalysts systems a wide range of structures are possible with an equally wide range of physical properties Numerous types of additives are presented that include additives for the protection of the resin from the environment and processing fillers processing aids anti fogging agents pigments and flame retardants Common processing methods including extrusion blown film cast film injection molding and thermoforming are presented along with some of the more specialized processing techniques such as rotational molding fiber processing pipe extrusion reactive extrusion wire and cable and foaming processes The business of polyethylene including markets world capacity and future prospects are detailed This handbook provides the most current and complete technology assessments and business practices for polyethylene resins
