

Abstract: *Staphylococcus aureus* and *Staphylococcus epidermidis* were isolated from the skin of patients with burns and from the skin of healthy subjects. The isolates were tested for sensitivity to various antibiotics. The results showed that the isolates were highly resistant to most antibiotics, including penicillin, tetracycline, and erythromycin. The isolates were also tested for virulence factors, including coagulase, catalase, and proteinase. The results showed that the isolates were highly virulent, with many isolates producing all three factors.
