theory and practice The emerging field of neurolaw seeks to address this question but doing so adequately requires confronting difficult philosophical issues surrounding the nature of mind free will rationality and responsibility In *The Philosophical Foundations of Neurolaw* Martin Roth claims that the central philosophical issue facing neurolaw is whether we can reconcile the conception of ourselves as free rational and responsible agents with the conception of ourselves as complex bio chemical machines Roth argues that we can reconcile these conceptions To show this Roth develops and defends an account of free will that identifies free will with the capacity to respond to rational demands and he argues that this capacity is at the foundation of our thinking about responsibility Roth also shows how the mind sciences can explain this capacity thus revealing that a purely physical system can have the kind of free will that is relevant to responsible agency Along the way Roth critiques a number of arguments that purport to show that the kind of reconciliation provided is not possible Roth concludes that though we should rethink our legal system in important ways both in light of his account of free will and what neuroscience is poised to reveal neuroscience does not threaten the law s core commitment to responsible agency
