- ▶ It follows that the charges on the amber and glass must be different. These different types of charge are opposites, as in the familiar expression "opposites attract."
- ▶ We know today that the two types of electric charge found on amber and glass are the only types of electric charge that exist.
- ▶ In 1747, Benjamin Franklin (1706-1790) proposed that the charge on glass be called **positive (+)** and the charge on amber be called **negative (-)**.
- ▶ Calling the different charges positive and negative is arbitrary. Franklin's names turned out to be useful mathematically.
