Getinge Operating Manual:

Manual of Neonatal Respiratory Care Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam, 2022-05-09 Respiratory care is the largest overall component of neonatal intensive care and the fifth edition of the *Manual of Neonatal Respiratory Care* is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant including embryology, principles of mechanical ventilation, procedures and techniques, monitoring devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy, and endotracheal intubation and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high frequency ventilation, reviewing general concepts, high frequency jet ventilation, and high frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the Draeger VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia, among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlight ethical, legal, and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, home ventilation, and withdrawal of ventilatory

support and medical liability and risk management The fifteenth section focuses on research and literature with coverage on interpreting medical literature data collection and assessment of respiratory outcomes and contemporary classics in neonatal respiratory care The final section presents ventilatory case studies The text also features over 300 high yield radiographic images figures tables and algorithms Mergent International Manual ,2009 Critical Care Manual of Clinical Nursing Procedures Suzanne Bench,Nicki Credland,Chris Hill,2024-11-04 Critical Care Manual of Clinical Nursing Procedures The second edition of Critical Care Manual of Clinical Nursing Procedures is a practical overview of essential procedures for the care of critically ill patients Beginning with chapters outlining the current scope of critical care the book adopts a systematic stage by stage approach from admission to discharge At each stage it provides insights into physiology key procedures and the relevant evidence base Now fully updated to incorporate the latest research and best practices this volume is poised to remain an indispensable resource for the next generation of critical care providers Readers of the second edition will find In depth beat by beat analysis of key procedures in critical care Interventions underpinned by the latest evidence Content aligned with the National Critical Care Competency Framework and endorsed by the British Association of Critical Care Nurses Critical Care Manual of Clinical Nursing Procedures is ideal for nurses working in a critical care unit nurses undertaking post qualification specialist courses in critical care or other healthcare professionals working as part of a critical care team **ECMO: A Practical Guide to Management** Ahmed Reda Taha,Mark Caridi-Scheible,Eric R.

Leiendecker,Casey Frost Miller,2024-09-06 ECMO has in the last year advanced rapidly in its prevalence and ease of use It is becoming the standard of care for the management of severe ARDS however its adoption outside of relatively few large hospitals in primarily very wealthy nations has been limited This is in part improving as the cost of the equipment and associated resources decline however a significant barrier to its use is the expertise required to manage the patient There are only a few existing reference books on the topic but they suffer from being too comprehensive too basic too theoretical or else they are too expensive for the average practitioner or hospital system to use as general reference material for training This book is designed to be a practical guide to the management of ECMO by the entire ECMO team from specialists to physicians It discusses the core physiological principles necessary to the understanding of its management but also then discusses how to practically apply these principles on a day to day basis It is structured in a focused and concise manner with an emphasis on translating theory to actual equipment and patients through the use of visuals The book is divided into twelve individual sections that each contain various chapters The first section provides an introduction to the book itself as well as the authors The second section explains the history of ECMO The third section focuses on program development while the fourth section is all about patient selection The fifth section details physics and technology while the sixth and seventh sections break down the physiology The eighth section describes cannulation and configuration while the ninth focuses on complications and emergencies The remaining three sections detail patient management pharmacology and anticoagulation

and weaning and decannulation Written by experts in the field ECMO A Practical Guide to Management targets bedside providers such as physicians and mid level providers however it is also a useful reference for nurses and respiratory therapists on the team While it contains sufficient advanced material to keep more seasoned practitioners engaged it also focuses on only the necessary and practical principles to appeal to a variety of readers [Mechanical Ventilation](#) David C.
