George A. Gerencser,2010-03-10 Biological cell membranes regulate the transfer of matter and information between the intracellular and extracellular compartments as basic survival and maintenance functions for an organism This volume contains a series of reviews that are concerned with how epithelial plasma membranes regulate the transport of solutes between the intracellular and extracellular compartments of a cell This book is also an attempt to analyze the molecular basis for the movement of various solutes across an epithelial cell membrane This volume is devoted to a diversity of epithelial transport mechanisms in representative cell membranes of a variety of living things The first section of the book Chapters 1-6 focuses on mechanisms of solute transport in epithelia of invertebrates The last section which comprises ten chapters Chapters 7-16 deals with solute transporters in epithelial cell membranes of vertebrates It is hoped that with this particular ordering the reader can glean a telescopic view of the evolutionary history of the various epithelial solute transporters
