

DUCTULATOR® SI UNITS

The required air flow rate in liters/second (L/s - outer blue and red bands) is established first. With only one of the following factors known, the other three are found from a single setting of the Ductulator.

1. Friction loss in Pascals (Pa) per meter of equivalent length.....(inner blue band)
2. Desired velocity in meters/second (m/s) in round duct.....(inner red band)
3. Round duct diameter in millimeters (mm).....(Window)
4. Dimensions for rectangular ducts (mm).....(Green bands)

Procedure: With the friction loss per meter of duct known, set this friction loss (inner blue band) opposite the required L/s. The resulting velocity in round duct (inner red band) coincides with established L/s in outer band. Round duct diameter is indicated in the window by the black arrow. Various equivalent rectangular duct sizes are read from the green bands.

Example: Assume a 5000 L/s air flow rate with a friction loss of 1 Pa per meter of duct.

A 9.3 m/s velocity is read opposite the 5000 L/s from the inner red band.
Round duct diameter is 835 mm.

Equivalent rectangular duct dimensions are 550 x 1100, 600 x 1000, 750 x 800, etc.
A similar procedure is used regardless of which one of the four factors is known.
* Approximate values.

SI to I-P conversions: The equivalent I-P duct sizes for any single setting of the Ductulator are read directly from the I-P scales on the reverse side. The equivalent air flow rate is obtained by converting L/s to CFM ($L/s \times 2.119 = CFM$). The corresponding friction loss and velocity are then read on the I-P scales.

Commercial Low Pressure, Low Velocity Duct System Design Hank Rutkowski, 1990 *Residential Duct Systems - Manual D* Acca, Hank Rutkowski, 2017-02
The Third Edition of ANSI ACCA Manual D is the Air Conditioning Contractor's of America procedure for sizing residential duct systems. This procedure uses Manual J ANSI ACCA Eighth Edition heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance pressure drop to blower performance as defined by manufacturer's blower performance tables. This assures that appropriate airflow is delivered to all rooms and spaces and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single zone systems and multi zone air zoned systems. The primary equipment can have a multi speed blower PSC motor or a variable speed blower ECM or constant torque motor or a true variable speed motor. Edition Three Version 2.50 of Manual D D3 specifically identifies normative requirements and specifically identifies related informative material.

Decoding **Guide Using Manual Ductulator**: Revealing the Captivating Potential of Verbal Expression

In a period characterized by interconnectedness and an insatiable thirst for knowledge, the captivating potential of verbal expression has emerged as a formidable force. Its capability to evoke sentiments, stimulate introspection, and incite profound transformations is genuinely awe-inspiring. Within the pages of "**Guide Using Manual Ductulator**," a mesmerizing literary creation penned by way of a celebrated wordsmith, readers set about an enlightening odyssey, unraveling the intricate significance of language and its enduring affect our lives. In this appraisal, we shall explore the book is central themes, evaluate its distinctive writing style, and gauge its pervasive influence on the hearts and minds of its readership.
