Diagnosis and Fault-Tolerant Control Mogens Blanke, Michel Kinnaert, Jan Lunze, Marcel Staroswiecki, 2015-08-11

Fault tolerant control aims at a gradual shutdown response in automated systems when faults occur. It satisfies the industrial demand for enhanced availability and safety in contrast to traditional reactions to faults which bring about sudden shutdowns and loss of availability. The book presents effective model based analysis and design methods for fault diagnosis and fault tolerant control. Architectural and structural models are used to analyse the propagation of the fault through the process to test the fault detectability and to find the redundancies in the process that can be used to ensure fault tolerance. It also introduces design methods suitable for diagnostic systems and fault tolerant controllers for continuous processes that are described by analytical models of discrete event systems represented by automata. The book is suitable for engineering students, engineers in industry and researchers who wish to get an overview of the variety of approaches to process diagnosis and fault tolerant control. The authors have extensive teaching experience with graduate and PhD students as well as with industrial experts. Parts of this book have been used in courses for this audience. The authors give a comprehensive introduction to the main ideas of diagnosis and fault tolerant control and present some of their most recent research achievements obtained together with their research groups in a close cooperation with European research projects. The third edition resulted from a major re structuring and re writing of the former edition which has been used for a decade by numerous research groups. New material includes distributed diagnosis of continuous and discrete event systems, methods for reconfigurability analysis and extensions of the structural methods towards fault tolerant control. The bibliographical notes at the end of all chapters have been up dated. The chapters end with exercises to be used in lectures.
