Drug Development for Parasite-induced Diarrheal Diseases Anjan Debnath, James H. McKerrow, 2017-08-25

One of the top four contributors to the global burden of disease is diarrheal infections Intestinal parasites are major causes of morbidity and mortality associated with diarrheal diseases in both the developed and developing world Amebiasis is responsible for 50 million cases of invasive disease and 70 000 deaths annually in the world Giardiasis has an estimated worldwide prevalence of 280 million cases annually In developed countries Giardia lamblia infects about 2% of adults and 6 8% of children The prevalence of G lamblia infection is generally higher in developing countries ranging from 3% to 90% Furthermore giardial infections contribute substantially to the 2 5 million annual deaths from diarrheal disease In Asia Africa and Latin America about 500 000 new giardiasis cases are reported each year Cryptosporidium accounts for 20% and 9% of diarrheal episodes in children in developing and developed countries respectively Infection with Cryptosporidium can be chronic and especially debilitating in immunosuppressed individuals and malnourished children A recent study to measure

disease burden based on disability adjusted life years DALYs found that cryptosporidiosis and amebiasis produce about 10.6 million DALYs. This exceeds the DALYs of any helminth infection currently being targeted by the World Health Organization for preventive chemotherapy. Because of its link with poverty, *Giardia* and *Cryptosporidium* were included in the WHO Neglected Diseases Initiative in 2004. *E. histolytica*, *G. lamblia*, and *C. parvum* have been listed by the National Institutes of Health (NIH) as category B priority biodefense pathogens due to low infectious dose and potential for dissemination through compromised food and water supplies in the United States. Despite the prevalence of amebiasis, giardiasis, and cryptosporidiosis, there are no vaccines or prophylactic drugs. The first-line drugs for invasive amebiasis and giardiasis chemotherapy are nitroimidazoles, with the prototype metronidazole being the most common drug used worldwide. Metronidazole has been shown to be both mutagenic in a microbiological system and carcinogenic to rodents and frequently causes gastrointestinal side effects. In spite of the efficacy of nitroimidazole drugs, treatment failures in giardiasis occur in up to 20% of cases. Clinical resistance of *G. lamblia* to metronidazole is proven, and cross-resistance is a concern with all commonly used anti-giardial drugs. Nitazoxanide, the only FDA-approved drug for the treatment of cryptosporidiosis, is effective in the treatment of immunocompetent patients and partially effective for immunosuppressed patients. Therefore, it is critical to search for more effective drugs to treat amebiasis, giardiasis, and cryptosporidiosis. This Research Topic for Frontiers in Microbiology will explore the recent progress in drug development for parasitic diarrheal diseases. This includes an understanding of drug resistance mechanisms. We would also welcome submissions on the drug development for other diarrheal parasites. We hope that this research topic will include a comprehensive survey of various attempts by the parasitology research community to create effective drugs for these diseases.

We Do Things Differently Mark Stevenson, 2018-01-16

There is hope for us yet. Stevenson's engaging commentary has the ability to restore your faith in human ingenuity in the face of adversity. Geographical magazine: Our systems are failing. Old models for education, healthcare, and government food production, energy supply are creaking under the weight of modern challenges. As the world's population heads towards 10 billion, it's clear we need new approaches. In We Do Things Differently, historian and futurologist Mark Stevenson sets out to find them across four continents. From Brazilian favelas to high-tech Boston, from rural India to a shed inventor in England's home counties, Mark Stevenson travels the world to find the advance guard reimagining our future. At each stop, he meets innovators who have already succeeded in challenging the status quo, pioneering new ways to make our world more sustainable, equitable, and humane. Populated by extraordinary characters, including Detroit citizens who created new jobs and promoted healthy eating by building greenhouses, an Austrian mayor who built a new biomass plant using the by-product of a local flooring company, and an Indian doctor who crowdsourced his research and published his findings online, We Do Things Differently paints a riveting picture of what can be done to address the world's most pressing dilemmas, offering a much-needed dose of down-to-earth optimism. It is a window on and a roadmap to a different

emerge from the shadows White middle class Protestant Americans in the 1920s found themselves stranded by an economy that was increasingly industrialized and fueled by immigrant labor Mirroring the Klan's earlier tactics Donald Trump delivered a message that mingled economic populism with deep cultural resentments McVeigh and Estep present a sociological analysis of the Klan's outbreaks that goes beyond Trump the individual to show how his rise to power was made possible by a convergence of circumstances White Americans experience of declining privilege and perceptions of lost power can trigger a political backlash that overtly asserts white nationalist goals The Politics of Losing offers a rigorous and lucid explanation for a recurrent phenomenon in American history with important lessons about the origins of our alarming political climate
