Workplace Monitoring Procedures Manual ,1985 *Soap-Making Manual. A practical Handbook on the RControl in the modern Soap Plant* E. G. Thomssen,2016-08-28 The material contained in this work appeared several years ago in serial form in the American Perfumer and Essential Oil Review Owing to the numerous requests received it has been decided to now place before those interested these articles in book form While it is true that the works pertaining to the soapmaking industry are reasonably plentiful books are quite rare however which in a brief volume will clearly outline the processes employed together with the necessary methods of analyses from a purely practical standpoint In the work presented the author has attempted to briefly clearly and fully explain the manufacture of soap in such language that it might be understood by all those interested in this industry In many cases the smaller plants find it necessary to dispense with the services of a chemist so that it is necessary for the soapmaker to make his own tests The tests outlined therefore are given as simple as possible to meet this condition The formulae submitted are authentic and in many cases are now being used in soapmaking In taking up the industry for survey it has been thought desirable to first mention and describe the raw materials used second to outline the processes of manufacture third to classify the methods and illustrate by formulae the composition of various soaps together with their mode of manufacture fourth to enumerate the various methods of glycerine recovery including the processes of saponification and fifth to give the most important analytical methods which are of value to control Pg iv the process of manufacture and to determine the purity and fitness of the raw material entering into it The Tinman's Manual and Builder's and Mechanic's Handbook, Designed for Tinmen, Japanners, Coppersmiths, Engineers ...
