Meijering, H. Hogeveen, C.J.A.M. de Koning, 2023-08-28 In 2000 the book *Robotic Milking* reflecting the proceedings of an International Symposium which was held in The Netherlands came out At that time commercial introduction of automatic milking systems was no longer obstructed by technological inadequacies Particularly in a few west European countries systems were being installed at an increasing rate However it was recognised that the changeover from traditional to automatic milking affected the farming operation herd management and control of milk quality profoundly and that many of the implications were still unknown So new challenges in various fields of dairy farming and new research areas emerged Since this previous International Symposium much has happened In general automatic milking has been adopted as a realistic alternative for milking in the traditional milking parlour Systems have gradually been improved and maybe even more importantly farmers have become more familiar with their potential and limitations both technically and in herd management The number of farms milking with an automatic milking system has worldwide increased to more than 2 200 by the end of 2003 From 2000 to now the level of scientific knowledge on various aspects and consequences of automatic milking has increased largely as well because of research efforts all over the world A significant share of these efforts has been made within the framework of a EU granted project on the implications of the introduction of automatic milking on dairy farms Some seven research institutes and six industrial companies from six countries joined their expertise and experience in order to facilitate a widespread adoption of automatic milking without undesirable side effects This book reflects the knowledge on automatic milking generated all over the world in the last few years Its contents can therefore be regarded as the present state of knowledge in the field of automatic milking for a better understanding     **Rethinking Faecal Sludge Management in Emergency Settings** Fiona Zakaria, 2019-07-24 The development of technology in the emergency sanitation sector has not been emphasised sufficiently considering that the management of human excreta is a basic requirement for every person The lack of technology tailored to emergency situations complicates efforts to cater for sanitation needs in challenging humanitarian crisis Concerns persists on the lack of faecal sludge management that considers the whole sanitation chain from containment until treatment This study focused on the development of a smart emergency toilet termed the eSOS emergency sanitation operation system smart toilet to address the limitation in technical options This toilet is based on the eSOS concept that takes into account the entire sanitation chain This study also addresses the limited time for planning in emergencies by developing a decision support system DSS to help quick selection of optimal sanitation options The aim was to enable users of the DSS to plan their emergency sanitation response within the shortest time possible The study aims to contribute toward a better emergency sanitation response by application of technology advances     *Field Manuals* United States.
