Mitchell Reyes,2021-04-15 As discrete fields of inquiry rhetoric and mathematics have long been considered antithetical to each other That is if mathematics explains or describes the phenomena it studies with certainty persuasion is not needed This volume calls into question the view that mathematics is free of rhetoric Through nine studies of the intersections between these two disciplines *Arguing with Numbers* shows that mathematics is in fact deeply rhetorical Using rhetoric as a lens to analyze mathematically based arguments in public policy political and economic theory and even literature the essays in this volume reveal how mathematics influences the values and beliefs with which we assess the world and make decisions and how our worldviews influence the kinds of mathematical instruments we construct and accept In addition contributors examine how concepts of rhetoric such as analogy and visuality have been employed in mathematical and scientific reasoning including in the theorems of mathematical physicists and the geometrical diagramming of natural scientists Challenging academic orthodoxy these scholars reject a math equals truth reduction in favor of a more constructivist theory of mathematics as dynamic evolving and powerfully persuasive By bringing these disparate lines of inquiry into conversation with one another *Arguing with Numbers* provides inspiration to students

established scholars and anyone inside or outside rhetorical studies who might be interested in exploring the intersections between the two disciplines In addition to the editors the contributors to this volume are Catherine Chaput Crystal Broch Colombini Nathan Crick Michael Dreher Jeanne Fahnestock Andrew C Jones Joseph Little and Edward Schiappa **Impact Assessment of Stem Initiatives in Improving Educational Outcomes** Pallavi Amitava Banerjee,2017-08-09 Impact assessment of STEM initiatives in improving educational outcomes explores research evidence and labour market reports to show why successive governments think STEM education matters It maps the policy background and the STEM crisis in the UK which led to the launch of the STEM informal education sector These schemes funded by the government educational charities and private organisations have now mushroomed at the local and national level In the midst of so many activities for various age groups do we know what works or works better for specific group of students Does one size fit all The book provides a detailed report of a longitudinal national evaluation conducted in the UK by making use of official datasets The activities evaluated here have not had a major influence on educational outcomes such as improved standardized national test results or increased STEM subject choices The robust evaluation protocol described in this well structured and thoughtful text will help schools to decide what works best for the students activity providers to evaluate long term outcomes for the activities they run researchers to replicate the protocol for similar activities in other settings Masters and PhD students understand how evidence from research can be used to inform policy and practice The results and implications combined with the recommendations made here will interest all those who are directly involved in the delivery of these enrichment and enhancement activities practitioners using evidence policy makers the research community and schools wanting to run their own evaluations **Lessons Learned from Research on Mathematics Curriculum** Denisse R Thompson,Mary Ann Huntley,Christine Suurtamm,2024-09-01 This volume focuses on research related to mathematics curriculum But rather than focusing on results of research it focuses on lessons learned about conducting research on curriculum whether about design and development analysis of curriculum in the form of official standards or textbook instantiations teacher intentions related to curriculum implementation or actual classroom enactment For scholars interested in curriculum research the volume offers lessons about conducting curriculum research that have been learned by others engaged in such work including frameworks tools and techniques as well as challenges and issues faced with solutions to address them Sharing lessons from authors of different countries strengthens the broader mathematics research community and provides insights that can help researchers make important strides forward in research on mathematics curriculum
