PROBLEM 1.C1

A solid steel rod consisting of n cylindrical elements welded together is subjected to the loading shown. The diameter of element i is denoted by d_i and the load applied to its lower end by P_i with the magnitude P_i of this load being assumed positive if P_i is directed downward as shown and negative otherwise. (a) Write a computer program that can be used with either SI or U.S. customary units to determine the average stress in each element of the rod. (b) Use this program to solve Problems 1.1 and 1.3.

SOLUTION

Force in element i :

It is the sum of the forces applied to that element and all lower ones:

$$F_i = \sum_{k=1}^i P_k$$

Average stress in element i :

$$\text{Area} = A_i = \frac{1}{4} \pi d_i^2$$

$$\text{Ave. stress} = \frac{F_i}{A_i}$$

Program outputs:

Problem 1.1	
Element	Stress (MPa)
1	84.883
2	-96.766

Problem 1.3	
Element	Stress (ksi)
1	22.635
2	17.927

Bezerra, Heber Sivini Ferreira, Normando Perazzo Barbosa, 2019-04-16 Nature has provided opportunities for scientists to observe patterns in biomaterials which can be imitated when designing construction materials. Materials designed with natural elements can be robust and environment friendly at the same time. Advances in our understanding of biology and materials science coupled with the extensive observation of nature have stimulated the search for better accommodation, compression of materials and the higher organization, reduction of mechanical stress in man-made structures. *Bio-Inspired Materials* is a collection of topics that explore frontiers in 3 sections: i) bio-inspired design, ii) bio-inspired construction, and iii) bio-materials. Chapters in each section address the most recent advances in our knowledge about the desired and expected relationship between humans and nature and its use in bio-inspired buildings. Readers will also be introduced to new concepts relevant to bionics, biomimicry, and biomimetics. Section i presents research concepts based on information gained from the direct observation of nature and its applications for human living. Section ii is devoted to artificial construction of the Earth. This section addresses issues on geopolymers, materials that resemble the structure of soils and natural rocks, procedures that reduce damage caused by earthquakes in natural construction, the development of products from vegetable resins, and construction principles using bamboo. The last section takes a look into the future towards the improvement of human living conditions. *Bio-Inspired Materials* offers readers having a background in architecture, civil engineering, and systems biology a new perspective about sustainable building, which is a key part of addressing the environmental concerns of current times. **Books in Print Supplement**, 2002 Scientific and Technical
