Key

1. The illustration below shows a series of transverse waves. Label each part in the space provided.

- crest
- wavelength
- amplitude
- trough
- amplitude
- wavelength
- equilibrium position

Fill in the blanks:

- Waves **do** transfer energy from one place to another, they **do not** transfer matter.
- The distance from one crest (or trough) to the next is the wavelength.
- The highest point on a transverse wave is the crest while the lowest part is the trough.
- The amplitude is the height of the wave.
- Below are a number of series of waves. Underneath each diagram write the numbers of waves in the series.

- Which of the above has the biggest amplitude? A
- Which of the above has the shortest wavelength? C
- Which of the above has the longest wavelength? D

7. Express in words and mathematically the relationship between

- period and frequency: *The period is inversely proportional to the frequency.* $T \propto \frac{1}{f}$ or $T = \frac{1}{f}$
- wavelength and frequency: *The wavelength is inversely proportional to the frequency.*

$$\lambda \propto \frac{1}{f} \text{ or } \lambda = \frac{v}{f}$$

- wavelength and period: *The wavelength is directly proportional to the period.*

$$\lambda \propto T \text{ or } \lambda = vT$$

8. Consider a wave generator that produces 10 pulses per second. The speed of the waves is 300 cm/s:

- What is the wavelength of the waves?

$$10 \text{ pulses per second is a frequency of } 10 \text{ Hz. } \lambda = \frac{v}{f} = \frac{300 \text{ cm/s}}{10 \frac{1}{s}} = 30.0 \text{ cm}$$

- What happens to the wavelength if the frequency of pulses is increased?

Since they are inversely proportional, if the frequency is increased, the wavelength decreases.

Waves and Particles in Light and Matter Augusto Garuccio, Alwyn van der Merwe, 2012-12-06 From September 24 through 30 1992 the Workshop on Waves and Particles in Light and Matter was held in the Italian city of Trani in celebration of the centenary of Louis de Broglie's birth As is well known the relationship between quantum theory and objective reality was one of the main threads running through the researches of this French physicist It was therefore in a fitting tribute to him on his 90th birthday that ten years ago an international conference on the same subject was convened in Perugia On that occasion physicists from all over the world interested in the problematics of

wave particle duality engaged in thoughtful debates the proceedings of which were subsequently published on recent theoretical and experimental developments in our understanding of the foundations of quantum mechanics This time around about 120 scientists coming from 5 continents in the warm and pleasant atmosphere of Trani s Colonna Conference Center focussed their discussions on recent results concerned with the EPR paradox matter interferometry reality of de Broglie s waves photon detection macroscopic quantum coherence alternative theories to usual quantum mechanics special relativity state reduction and other related topics The workshop was organized in plenary sessions round tables and poster sessions and the present volume collects most but not all of the presented papers A number of acknowledgements are due We thank first of all the contributors without whose constant dedication this volume could not have been published
