Culinary Nationalism in Asia Michelle T. King,2019-07-11 With culinary nationalism defined as a process in flux as opposed to the limited concept of national cuisine the contributors of this book call for explicit critical comparisons of cases of culinary nationalism among Asian regions with the intention of recognizing patterns of modern culinary development As a result the formation of modern cuisine is revealed to be a process that takes place around the world in different forms and periods and not exclusive to current Eurocentric models Key themes include the historical legacies of imperialism colonialism nationalism the Cold War and global capitalism in Asian cuisines internal culinary boundaries between genders ethnicities social classes religious groups and perceived traditions modernities and global contexts of Asian cuisines as both nationalist and internationalist enterprises and Asia itself as a vibrant culinary imaginary The book which includes a foreword from Krishnendu Ray and an afterword from James L Watson sets out a fresh agenda for thinking about future food studies scholarship

Wei-Lynn Wong,2020-05-21

Programmed cell death PCD is central in maintaining the life of multicellular organisms during development as well as in healthy adulthood or in the context of disease The best understood form of PCD is apoptosis a caspase mediated immunologically silent cell death that can be initiated in probably all cell types upon aging lack of growth support critical damage or infection One of the key pathways of apoptosis involves mitochondrial outer membrane permeabilization MOMP a process tightly regulated by members of the BCL 2 family Whereas PCD and apoptosis were used synonymously in the past other forms of PCD have been discovered more recently including RIPK1 3 and MLKL dependent necroptosis resulting in a necrotic phenotype and pyroptosis Interestingly key components of the necroptotic pathway are actively suppressed by apoptotic caspases and this interconnection allows a switch in cell death modalities with greatly impact on the host s immune response Recent findings link mitochondria and or MOMP to non apoptotic forms of PCD including ferroptosis and necroptosis putting this organelle even more in the center of cellular death This article collection highlights the exciting potential and as yet undiscovered regulation of programmed cell death that can impact the immune system and its response
