Designing with Natural Materials Graham A. Ormondroyd, Angela F. Morris, 2018-09-03 In a world now forced to address the issues of sustainability environmental impact and the widespread pollution of land and oceans with manmade materials alternative resources must be considered for the future of the planet A vast array of natural materials is available throughout the world with properties that are often superior to the man made alternatives Designing with Natural Materials fills the gap between the current scientific knowledge of the use of natural materials and product design and acts as a bridge between the two disciplines The book serves as an introduction to natural materials within the context of design The chapters include case studies research and a historical perspective It develops ideas of designing with natural materials in specific areas and looks to the future of new biobased materials and how these will influence design The work offers insight to designers of biobased materials across a range of different design disciplines while also providing insights to scientists on the process of design production and the needs of a material beyond those traditionally analyzed in the laboratory The final chapters touch on the use of bioinspiration and biomimicry in the development and use of biobased materials and how natural design will influence both material design and products in the future The book will be of interest to engineers scientific researchers professional designers students those working in industry who are considering using natural materials as an alternative to current unsustainable options and anyone who has an interest in the subject

Energy Made Easy Ronald Stein, Todd Royal, 2019-08-08 Energy is multifaceted and Energy Made Easy allows the reader to grasp enough knowledge quickly so they can participate in discussions with family friends co workers or while watching news reports The main purpose of the book is to Help Citizens Become Energy Literate As an added benefit to the reader each chapter is a stand alone read on twelve energy subjects The readers may not be interested in the entire spectrum of energy but can selectively pick and choose hot energy topics trending on current news or social media coverage It is dangerous and delusional to believe anything can be explained in sound bites much less energy This book will make you look at energy and electricity in a new fresh way and perspective We believe this is desperately needed with the upcoming U S Presidential election and global events taking place in China Russia Iran Africa India and South America
