Knowledge Modelling and Decision Making Van-Nam Huynh,Masahiro Inuiguchi,Bac Le,Bao Nguyen Le,Thierry Denoeux,2016-11-21 This book constitutes the refereed proceedings of the 5th International Symposium on Integrated Uncertainty in Knowledge Modelling and Decision Making IUKM 2016 held in Da Nang Vietnam in November December 2016 The IUKM symposia aim to provide a forum for exchanges of research results and ideas and experience of application among researchers and practitioners involved with all aspects of uncertainty modelling and management *Mechanical Simulation with MATLAB®* Dan B. Marghitu,Hamid Ghaednia,Jing Zhao,2021-11-11 This book deals with the simulation of the mechanical behavior of engineering structures mechanisms and components It presents a set of strategies and tools for

formulating the mathematical equations and the methods of solving them using MATLAB For the same mechanical systems it also shows how to obtain solutions using a different approaches It then compares the results obtained with the two methods By combining fundamentals of kinematics and dynamics of mechanisms with applications and different solutions in MATLAB of problems related to gears cams and multilink mechanisms and by presenting the concepts in an accessible manner this book is intended to assist advanced undergraduate and mechanical engineering graduate students in solving various kinds of dynamical problems by using methods in MATLAB It also offers a comprehensive practice oriented guide to mechanical engineers dealing with kinematics and dynamics of several mechanical systems *Funicular Structures* Damon

Bolhassani,2025-04-16 Funicular structures are structural skeletons designed using methodologies that analyze the flow and direction of forces which can be categorized as compression tension or a combination of both They are not only elegant resembling naturally occurring forms but also highly efficient and can be built with minimal use of relatively low strength materials thus minimizing their negative environmental impact This book presents an in depth overview of the theoretical foundations and practical methods of designing funicular structures for maximum efficiency Beginning with a foundation and introduction to funicular structures for those new to the subject the book then provides in depth coverage of cables arches shells and vaults domes and spatial structures Chapters explain the theory behind funicular structures in 2D spatial funicular structures in 3D and examine their structural behavior Recent and historically famous structures from around the globe are analyzed and their potential design methods revealed through step by step visual explanations Structural analysis of funicular structures in different forms are also presented to demonstrate pitfalls and common errors Tracing the various methods of designing funicular structures including the latest computational tools this book provides a solid foundation for students of architecture structural design civil engineering landscape design and environmental design to embark on their own funicular design projects **Approaching Human Performance** Markus Grebenstein,2014-01-24

Humanoid robotics have made remarkable progress since the dawn of robotics So why don t we have humanoid robot assistants in day to day life yet This book analyzes the keys to building a successful humanoid robot for field robotics where collisions become an unavoidable part of the game The author argues that the design goal should be real anthropomorphism as opposed to mere human like appearance He deduces three major characteristics to aim for when designing a humanoid robot particularly robot hands Robustness against impacts Fast dynamics Human like grasping and manipulation performance Instead of blindly copying human anatomy this book opts for a holistic design methodology It analyzes human hands and existing robot hands to elucidate the important functionalities that are the building blocks toward these necessary characteristics They are the keys to designing an anthropomorphic robot hand as illustrated in the high performance anthropomorphic Awiwi Hand presented in this book This is not only a handbook for robot hand designers It gives a comprehensive survey and analysis of the state of the art in robot hands as well as the human anatomy It is also aimed at researchers and roboticists interested in

the underlying functionalities of hands grasping and manipulation The methodology of functional abstraction is not limited to robot hands it can also help realize a new generation of humanoid robots to accommodate a broader spectrum of the needs of human society
