This thesis introduces a new integrated algorithm for the detection of lane level irregular driving To date there has been very little improvement in the ability to detect lane level irregular driving styles mainly due to a lack of high performance positioning techniques and suitable driving pattern recognition algorithms The algorithm combines data from the Global Positioning System GPS Inertial Measurement Unit IMU and lane information using advanced filtering methods The vehicle state within a lane is estimated using a Particle Filter PF and an Extended Kalman Filter EKF The state information is then used within a novel Fuzzy Inference System FIS based algorithm to detect different types of irregular driving Simulation and field trial results are used to demonstrate the accuracy and reliability of the proposed irregular driving detection method
