Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation but also under 1D 2D or 3D excitation. Because the methods, sensors and apparatus are extensively discussed, it will also be a great reference for more senior researchers and experts in the field. There is a whole chapter devoted to analysis of measurement uncertainty. This subject is rarely published for magnetic measurements, which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation. This chapter not only introduces the whole subject but also provides multiple step by step examples which can be easily followed from very simple cases to much more complex ones. All equations are presented with full SI units, which greatly helps in practical application of the presented methodology. Each chapter is written in such a way that it can be studied on its own so that the reader can focus only on the specific aspects as required.
