

The National Assessment of Educational Progress (NAEP) includes a mathematics test for eighth-grade students. Scores on the test range from 0 to 500. Demonstrating the ability to use the mean to solve a problem is an example of the skills and knowledge associated with performance at the Basic level. An example of the knowledge and skills associated with the Proficient level is being able to read and interpret a stem-and-leaf plot.

In 2019, 147,400 eighth-graders were in the NAEP sample for the mathematics test. The mean mathematics score was $\bar{x} = 282$. We want to estimate the mean score μ in the population of all eighth-graders. Consider the NAEP sample as an SRS from a Normal population with standard deviation $\sigma = 40$.

Use the 95 part of the 68-95-99.7 rule to determine a 95% confidence interval for the population mean score μ based on this one sample. Give your answers to at least two decimal places.
