Light from the Other Side Jay Harold Ellens, 2011-01-01 This volume presents the narrative of the author's personal spiritual journey which is marked by numerous constructive life changing paranormal experiences that can only be accounted for as special initiations of the divine spirit providing intimations and illuminations These events are set in the context of the rich literature available which reports similar events in the lives of many other persons under both normal and extreme circumstances The author a clinical psychologist and pastoral theologian interprets this broad panoply of psycho spiritual data in terms of psychological science and biblical perspectives He concludes that the divine spirit is pervasive throughout the universe and present in all the dynamics of life forms constantly endeavoring to communicate with humans Thus the paranormal may well be more normal than the normal human experience and the veil between time and eternity between the mundane and transcendent worlds and between life and the life to come is apparently more permeable in both directions than we suppose Goodman and Fuller's Pathology E-Book Catherine Cavallaro Kellogg, Kenda S. Magnetic resonance imaging of disturbed brain connectivity

in psychiatric illness Alex Fornito, Ben Harrison, The widespread application of brain imaging to the study of psychiatric disorders has led to a revolution in our understanding of the neural basis of psychiatric illness. In particular, the advent of magnetic resonance imaging (MRI) has provided an unprecedented capacity for quantifying diverse aspects of brain structure and function in vivo and has been used to identify brain changes associated with the full spectrum of psychopathology. With respect to major psychiatric disorders, it is now abundantly clear from this literature that focal brain dysfunction is rare. Rather, most disorders are associated with abnormalities in large-scale networks of spatially distributed and interconnected brain regions, i.e., they are disorders of brain connectivity. Such considerations highlight the need to understand brain dysfunction in psychiatric illness from a network-based perspective. This goal is starting to be realized through recent advances in the use of MRI to map the brain's complex connectivity architecture. In this special edition, we invite contributions that address brain network dysfunction in psychiatric illnesses. Specifically, the work must be concerned with understanding interactions between brain regions and how their alterations are affected by psychiatric disease. These interactions can be studied at the level of anatomy using diffusion MRI or function using functional MRI (fMRI) with the full range of methods available, e.g., tractography, seed-based correlations, independent component analysis, graph analysis, dynamic causal modeling, etc. Contributions can be either reviews of recent relevant literature addressing brain network dysfunction in psychiatric disease or experimental papers describing novel insights into brain network disturbances in such illnesses. Contributions will be invited covering a broad spectrum of psychiatric disease, including mood and anxiety disorders, schizophrenia, autism, attention deficit hyperactivity disorder, and neurodegenerative conditions. It is intended that this volume will provide important insights into how brain networks are perturbed by psychiatric disease and allow identification of commonalities and differences across diagnostic categories.

The Book of the Heart Eric Jager, 2000-08 In today's increasingly electronic world, we say our personality traits are hard-wired and we replay our memories. But we use a different metaphor when we speak of someone reading another's mind or a desire to turn over a new leaf; these phrases refer to the book of the self, an idea that dates from the beginnings of Western culture. Eric Jager traces the history and psychology of the self as text concept from antiquity to the modern day. He focuses especially on the Middle Ages when the metaphor of a book of the heart, modeled on the manuscript codex, attained its most vivid expressions in literature and art. For instance, medieval saints' legends tell of martyrs whose hearts recorded divine inscriptions; lyrics and romances feature lovers whose hearts are inscribed with their passion; paintings depict hearts as books, and medieval scribes even produced manuscript codices shaped like hearts. *The Book of the Heart* provides a fresh perspective on the influence of the book as artifact on our language and culture. Reading this book broadens our appreciation of the relationship between things and ideas.

Cognitive Processes in Individual and Collective Creativity: A Cross-Cultural Perspective Chang Liu, Linden John Ball, Haiying Long, Wangbing Shen, 2019-12-30 Creativity, the highest level of human wisdom, has become an increasingly important concept in different fields of psychological enquiry, particularly because it is portrayed as contributing to many aspects of society, including personal development, economic prosperity, and technological advancement. However, although considerable research attention from a wide range of disciplinary backgrounds has focused on trying to understand creativity, the specific nature of creativity, its theoretical underpinnings, and cognitive mechanisms remain unclear. Not least, when it comes to the understanding of creativity at the individual level and creativity at the collective level, on the one hand, there are crucial distinctions between individual and collective creativity. On the other hand, the process of being creative involves not only independent or individual efforts but also interdependent or collective efforts. Understanding these differences and interrelationships is crucially important in studies of creativity. In this Research Topic, we bring together research from a wide variety of cognitive and psychological approaches and perspectives in order to provide a comprehensive and in-depth understanding of creativity at both the individual and collective levels. Furthermore, cognitive mechanisms in the creativity process are unavoidably affected by sociocultural factors, and these mechanisms look different across cultures, particularly between Eastern cultures and Western cultures, two worlds that often imply dramatically dissimilar values and perspectives. Despite the fact that many studies have compared and contrasted these two cultures in various respects, little research has focused on the specific topic of cultural variation in creative cognition. In addition, very few studies have examined the

differences in the cognitive mechanisms underpinning the cultural variations that can be observed at a surface level This Research Topic aims to fill this gap in the literature and examine the cognitive processes and mechanisms in the creativity process at both individual and collective levels across different cultures by using theoretical and empirical evidence
