

## Fixed fire fighting equipment

### Hose reels

Hose reels are connected permanently to the water supply. This gives an advantage over portable fire extinguishers by making a large amount of water available very quickly.

Thought must be given to hose reel location as they can wedge open fire doors, can cause a trip hazard and they have a limited range (typically 30m with a jet of 6m).

Hoses should not be used where there is live electricity and there is an additional danger that people can put themselves at risk by fighting a fire for too long with a constant water supply.

### Sprinkler and drenchers

These systems deliver water through a network of pipes and sprinkler heads. When activated, the water from the sprinkler head will restrict or extinguish fire and help prevent the build up of heat. Drenchers are similar to sprinklers systems but are located outside in order to prevent fire spreading from one building to the next.

### Wet and dry risers

Risers are vertical water pipes and valves that are fitted in high-rise buildings for use by the fire service. Wet risers have pipes that are permanently charged with water whilst dry risers have empty pipes that will fill with pressurised water when needed.

### Gas flooding systems

As these systems present a risk of suffocation, they are only used in enclosed spaces that are normally unoccupied (such as electrical equipment rooms). An alarm will usually warn that the system is about to be activated and then after a delay, the room will be "flooded" with gas (usually Carbon Dioxide) to replace the air and smother the fire.

### Foam systems

Facilities that store flammable liquids (such as fuel storage tanks, chemical plants, etc.) may use a fixed foam system. The foam not only smothers the fire but also reduces the chance of re-ignition by controlling vapour build-up.

## Fire extinguishers

### Extinguishing fires

To extinguish a fire, one or more of the elements in the fire triangle has to be removed or reduced to a level where it will no longer support combustion.

Most extinguishers work by smothering or cooling the fire (or a combination of both methods). Some dry powder extinguishers are also designed to slow down a chemical reaction that is needed for something to burn. Employers and those responsible for premises must provide appropriate fire fighting equipment and ensure that sufficient people are trained in using it.

### Fire extinguisher checks

A trained fire extinguisher engineer should inspect and service all extinguishers annually. In addition, it is also important that extinguishers are checked regularly throughout the year to ensure that:

- The pressure gauge needle is in the correct position (in the green zone).
- There are no signs of tampering and the safety pin is in place.

- It has been serviced within the last 12 months (a test label should be visible).
- There are no signs of rust, corrosion or leaks.
- It is stored correctly in an easily accessible position, ready to be picked up and with a sign indicating its type placed next to it.
