Horizon Work Adriana Petryna, 2024-08-20 A new way of thinking about the climate crisis as an exercise in delimiting knowable and habitable worlds As carbon dioxide emissions continue to rise Earth's fragile ecosystems are growing increasingly unstable and unpredictable Horizon Work explores how climate change is disrupting our fundamental ability to project how the environment will act over time and how these rapidly faltering predictions are colliding with the dangerous new realities of emergency response Anthropologist Adriana Petryna examines the climate crisis through the lens of horizoning a mode of reckoning that considers unnatural disasters against a horizon of expectation in which people and societies can act She talks to wildfire scientists who amid chaotic fire seasons and shifting fire behaviors are revising predictive models calibrated to conditions that no longer exist Petryna tells the stories of wildland firefighters who could once rely on memory of previous fires to gauge the behaviors of the next Trust in patterns has become an occupational hazard Sometimes the very concept of projection becomes untenable Yet if all we see is doom we will overlook something crucial about the scientific and ethical labor needed to hold back climate chaos Here is where the work of horizoning begins From experiments probing our planetary points of no return to disaster ecologies where the stark realities of climate change are being confronted Horizon Work reveals how this new way of thinking has the power to reverse harmful legacies while turning voids where projection falters into spaces of collective action and recoverable futures 2024-25
