A GUIDE BOOK TO MANAGING SAP SRM SYSTEM EFFECTIVELY Vinita Kasliwal, 2018-09-04 This book comprises of 115 top consulting scenarios which you should know when you start to work in any procurement module but specifically in SRM Module in SAP I have added these easy to understand in the one page format which makes it easy to refer back Keep as a side note and should be a guide for you to help you in handling most of the scenarios in SRM As per what happens in any consulting environment the issues you actually get from your client may not be included in here but after you have read through this guide it would give you a very good base in the terms of helping you to experiment and try things out in the system directly to come closer to a resolution These are prepared based on my notes from hundreds of meetings being part of multiple projects brainstorming with my

colleagues and lastly to be able to provide ongoing support to my clients to manage their procurement landscape Please note that this book focuses on building basic concepts for both Technical as well as functional people so I recommended you go through all the pages to have a good understanding of the SRM system If you have basic ABAP knowledge it would be easier if not it can be a good learning which can also be applied to other SAP modules Although this book is geared more towards SRM as a product having worked in other modules as well I also include some general SAP concepts which help you to apply the same knowledge in multiple other modules like MM PM HR and other areas SRM has a tight integration with all the above modules and hence it is important to have a good understanding so you can work effectively in a collaborative environment with other team members by knowing how the other module work rather than just passing the buck Below are the details of what the book contains Understand the basics and best practices of procurement Understand basics of SAP system in general for troubleshooting and support Added scenarios from real time case studies and client specific issues Each section is concluded with additional blog and reference links which help to understand the problem in detail Includes ABAP technical and Functional details Includes consulting scenarios Includes Audit specific information Include any relevant notes and other material Includes some of my previously written blogs Some code snippets which you can reuse if you implement the same scenarios In the last 2 chapters I also try to talk about the next step for SRM and how you can transition to Ariba or other S 4 Modules in the cloud There is also a detailed blog which I posted on SDN to help you prepare for Ariba certification

Process-Driven Applications with BPMN Volker Stiehl, 2014-09-17 How can we optimize differentiating business processes and exploit their full potential Here Volker Stiehl provides answers utilizing the various options that the BPMN Business Process Model and Notation standard offers for planning implementing and monitoring processes The book presents an approach for implementing an architecture for applications that strives to find a balance between development and maintenance costs sustainability scalability and fault tolerance that meets flexibility requirements without becoming inordinately complex itself and that keeps the end application as abstract as possible from the system landscape in which it operates Based on the semantic enhancements found in version 2.0 of the BPMN standard which have made it possible to execute process models his approach exploits BPMN to create and run complete application architectures In this context BPMN is not just used to model the business processes of the application as the B in BPMN might suggest but also to model and execute the integration processes between the systems Throughout the book the software package SAP Process Orchestration is used to illustrate the implementation of the proposed architecture yet all recommendations are intentionally kept generic so that they can be implemented on any other comparable platform as well Software architects IT managers software developers and project managers as well as students of information and business technology will find the book a valuable resource The proposed application architecture offers them a detailed blueprint the principles of which they can use to plan and implement process driven distributed applications
