A photograph of a coastal scene from an aerial perspective. In the foreground, a small town or city is visible along a coastline. A prominent feature is a tall, white lighthouse standing on a rocky outcrop. A long pier extends from the shore into the water. In the middle ground, a large cargo ship is sailing on the ocean, leaving a white wake. The background shows a vast expanse of blue ocean meeting a sky filled with scattered white clouds.

This book offers students an introduction to the basic concepts and principles of physics. It covers various topics specifically related to waves, sound, electricity, magnetism, and optics. Each chapter begins with a summary of concepts, principles, definitions, and formulae to be discussed, as well as ending with problems and solutions that illustrate the specific topic. Steps are detailed to help build reasoning and understanding. There are 250 worked problems and 100 exercises in the book, as well as 280 figures to help the reader visualize the processes being addressed. Computer calculations and solutions are carried out using wxMaxima to give insight and help build computational skills. The book is aimed at first-year undergraduate students studying introductory physics and would also be useful for physics teachers in their instruction, particularly the exercises at the end of each chapter.
