Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The children were divided into two groups: a control group and an experimental group. The control group continued with their normal physical education program, while the experimental group followed a more intensive program. The results showed that the experimental group had significantly higher levels of physical fitness than the control group at the end of the 12-week program. The findings suggest that a structured physical education program can improve the physical fitness of 10-year-old children.

Management recommendations: If you are not willing to get pesticides (which would increase the risk of getting a tick), keep your dog off the fields. So far, and for long, there is no tick on the dog.
