

# Running vs Walking

A narrower base helps enhance propulsion for runners.

The medial portion of the upper fits snug to secure feet when running.

A pronounced tread helps lessen fatigue during runs, but during walking can increase pressure underfoot.

More flex grooves in the outsole help runners stay balanced at their faster pace.

Wider base for extra support and stability.

Improved upper fit on medial side for comfort and flexibility.

Evenly distributed flex grooves better support heel-to-toe movement.

A different tread better distributes pressure
