**Cultivating Knowledge** Scott Tunison, 2016-07-27 Over the last decade or two there has been increasing consensus that academic research if used judiciously to guide practice improves both educational policy and pedagogy ultimately leading to better outcomes for students Yet despite this potential there remains a deep ravine between the body of knowledge built through research especially at the intersection between specific interventions and improved student achievement and the actions taken by policy makers administrators and classroom teachers in their regular practice There are myriad reasons for this research practice divide Among them is that it is difficult for district based people to access primary research Furthermore multiple waves of well intentioned research based but largely unsuccessful school reform efforts have resulted in skepticism among practitioners about research and at the same time damaged researchers credibility in the field This book is divided into three broad areas First it develops an engaging analysis of the root causes for the research practice gap in education Second it describes the framework developed and used in a public school district by the author to address the root causes and provides evidence of its efficacy to facilitate greater incorporation of research into school and district level practice Through a process the author calls Knowledge Cultivation the framework uses weekly research summaries for district leaders that are relevant to their real time issues along with suggestions about ways in which the research might be useful The final section of the book includes the actual research summaries used by the author over a five year period
