

Single Vertical Hitch

The total weight of the load is supported by a single choker, therefore the weight can equal the safe working load of the sling, as illustrated in illustration #34. The load will likely need a tag line for control.

Bridle Hitch

The bridle hitch can be made up of a number of legs, usually 2, 3 or 4. See illustration #35 for a two leg bridle.

A bridle hook up with 2 legs is usually straightforward. However a non.-symmetrical load, such as illustration #36, requires the hook to be positioned over the center of gravity. A type of adjustment method is needed to increase or decrease one leg length to keep the load level.

On lighter loads a turnbuckle, a come-a-long, or a chain fall can be used, but these last two are not recommended because a number of factors such as shock loading, extreme sling angles or unknown weights could overload them. Getting the proper adjustment is usually not easy
