Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science

Experiences in Software Evolution and Reuse Svein Hallsteinsen,Maddali Paci,2012-12-06 Implementing systematic reuse is risky not doing it is even more risky Trying systematic reuse unsuccessfully can cost precious time and resources and may make management sceptical of trying it again But if your competitors do it successfully and you do not you may lose market share and possibly an entire market W B Frakes and S Isoda 1994 Software companies today are faced with new and more challenging market pressures In response to this challenge they have to reduce the time to market with new or enhanced products increase the diversity of products available to the customers and enhance the standardisation and interoperability of the products At the same time many companies carry the burden of large legacy systems that have become too expensive to maintain and cannot sustain the demands of the marketing department for alterations leading to business opportunities being lost BEN95 However the systems are very valuable and cannot be simply replaced because of the costs that such an operation entails Simply replacing them may be too expensive because of the huge volumes of on line data that must be converted among other reasons
