

# Metals in Aqueous Solutions Simulations

## How to use it

Some elements are more reactive than others, meaning that they are more likely to form compounds than to be found in their pure elemental or "free" form. Other elements are less reactive and more likely to be found as pure elements, not in a compound. This simulation will allow you to test various combinations of elements and compounds, to see if reactions of elements in water form more reactive or less reactive products as they are combined. Some reactive elements will replace less reactive elements in a compound given the opportunity to react. Less reactive elements will remain as pure elements and will not react with compounds containing more reactive elements.

## Objectives

Use the results of the simulated experiments to determine the activity series for the elements using this simulation.

## Procedure

For now, the simulation at <https://chemistry.mhhe.com/chem101/experiments/101-01/elements-solutions-simulation> and complete parts of the PCOP, sections Activity 5.1 and Lab Observations section, recording the appropriate information and answering the questions below.
