Security and Reliability of Damaged Structures and Defective Materials Guy Pluinage, Aleksandar Sedmak, 2009-07-06 Structures that are essential for economy and security such as energy production transportation and supply water supply buildings are susceptible to failure because of defects already present in the material or created at fabrication or appearing during service Methods of assesment of the nocivity of these defects are needed to predict the remaining service life and the eventual emergency of stopping service and repairing if possible To reach this objectives this book presents the last methods derived from the classical linear non linear fracture mechanics concepts including fatigue and notch fracture mechanics Several examples of structures rehabilitations and repairing are given This book gathers the presentation made during the Advanced Research Workshop held in Portoroz Slovenia in October 2008 under the auspices of NATO Science for Peace and Security Programme It is edited by Professor Guy Pluinage from the University Paul Verlaine Metz France and Professor Aleksandar Sedmak from the University of Belgrade Faculty of Mechanical Engineering Both have a long and rich experience in analysis of theoretical and practical cases in safety and reliability of structures Other contributors are all known as experts in the areas of fatigue facture and reliability of structures

Nanostructure Based Sensors for Gas Sensing: from Devices to Systems Sabrina Grassini, Nicola Donato, 2019-10-29 The development of solid state gas sensors based on microtransducers and nanostructured sensing materials is the key point in the design of portable measurement systems able to reach sensing and identification performance comparable with analytical

ones In such a context several efforts must be spent of course in the development of the sensing material but also in the choice of the transducer mechanism and its structure in the electrical characterization of the performance and in the design of suitable measurement setups This call for papers invites researchers worldwide to report about their novel results on the most recent advances and overview in design and measurements for applications in gas sensors along with their relevant features and technological aspects Original research papers are welcome but not limited on all aspects that focus on the most recent advances in i basic principles and modeling of gas and VOCs sensors ii new gas sensor principles and technologies iii Characterization and measurements methodologies iv transduction and sampling systems vi package optimization vi gas sensor based systems and applications **Bureau of Ships Manual: Moorings and appliances (1942-43, 1946)** United States.
