

Controls and Features

The 730 Receiver incorporates touch sensors. Most of the functions of the 730 can be controlled by simply touching the appropriate sensor. Lamps immediately under the sensors glow to indicate the control status of the 730. An internal memory retains the control status when the receiver is switched off or disconnected from an A/C outlet. Thus, if the receiver is tuned to a specific FM station at a specific volume when you turn it off, it will still be at that station and volume the next time you turn it on. Please note that the touch sensors rely on some residual moisture on the tips of your fingers. If your hands are extremely cold — as they might be during the winter months when you first come in from outdoors—you may need to rub or otherwise moisten your fingertips.

(1) Power Sensor:

Activates the 730 when the master power switch (on the rear panel) is in the "ON" position. When power is on, the orange indicator lamp immediately beneath the sensor will glow. A second touch of the power sensor will turn the 730 off.

(2) Headphone Jacks A and B:

Accept stereo headphones with impedance between 8 and 250 ohms. Inserting a headphone plug into jack A will automatically cut off output to the speakers. You can use headphones and speakers simultaneously by inserting the headphone plug into jack B.

(3) Volume Control Sensors:

The outer two volume sensors raise or lower the volume quickly. Touching either of the outer sensors and the center sensor simultaneously will raise or lower the volume slowly.

(4) Volume Indicator

(5) Volume Scale

(6) Audio Mute Sensor:

The audio mute decreases the volume by 14 dB when you touch this sensor. Thus, you can lower the volume temporarily to connect or disconnect headphones, answer a telephone call, or change FM stations. To disengage the audio mute, touch the sensor a second time. The audio mute indicator light will go out and the volume level will return to normal.

(7) Function Sensor Group:

By touching the appropriate sensor, you can select a turntable ("Phono"), either of two tape decks ("Tape 1" and "Tape 2"), FM, or an auxiliary input ("Aux") as the source.

(8) Volume Preset Control:

Sliding the control to the left of its center detented position decreases the volume and applies loudness contour compensation. Sliding the control to the right of the center detent decreases the volume. You can use the volume preset control to supplement the main volume control. By presetting a certain amount of loudness compensation or attenuation, you can establish a comfortable listening level at "10" on the volume scale.

(9) Balance Control:

Sliding the control to the left of its center detented position moves the stereo image toward the left speaker by decreasing the loudness of the right speaker. Sliding the control to the right of the center detent has the opposite effect. You can use the balance control to adjust the stereo image for room conditions and for imbalances in the program material.
