NASA had no experience launching the shuttle in temperatures as cold as on the morning of Jan. 28, 1986. The coldest temperature of a previous launch was 20 degrees warmer.

Morton Thiokol, the builder of the solid-rocket boosters, advised NASA that they believed the O-ring seals in the solid-rocket boosters would perform adequately in the cold.

RUBBER O-RINGS

To make each solid-rocket booster, the Morton Thiokol factory built four hull segments filled with powdered aluminum (fuel) and ammonium perchlorate (oxidizer).

At the launch site, the fuel segments were assembled vertically. Field joints containing rubber O-ring seals were installed between each fuel segment.

The O-rings were never tested in extreme cold. On the morning of the launch, the cold rubber became stiff, failing to fully seal the joint.

This diagram illustrates the exploded view of the Space Shuttle Main Engine (SSME) components, showing the following parts from top to bottom:

As the shuttle ascended, one of the seals on a booster rocket opened enough to allow a plume of exhaust to leak out. Hot gases bathed the side of the cold external tank full of liquid oxygen and hydrogen until the tank ruptured.

At 73 seconds after liftoff, at an altitude of 9 miles (14.5 kilometers), the shuttle was torn apart by aerodynamic forces.

The two solid-rocket boosters continued flying until the NASA range safety officer destroyed them by remote control.

The crew compartment ascended to an altitude of 12.3 miles (19.8 km) before free-falling into the Atlantic Ocean.

April 12 2011 is the 50th anniversary of Yuri Gagarin's pioneering journey into space To commemorate this momentous achievement Springer Praxis is producing a mini series of books that reveals how humanity's knowledge of flying working and living in space has grown in the last half century *Tragedy and Triumph* focuses on the 1980s and early 1990s a time when relations between the United States and the Soviet Union swung like a pendulum between harmony and outright hostility The glorious achievements of the shuttle were violently arrested by the devastating loss of Challenger in 1986 while the Soviet program appeared to prosper with the last Salyut and the next generation Mir orbital station This book explores the continued rivalry between the two superpowers during this period with each attempting to outdo the other the Americans keen to build a space station the Soviets keen to build a space shuttle and places their efforts in the context of a bitterly divisive decade which ultimately led them into partnership Air Force Journal of Logistics ,1995 **Report to the President by the Presidential Commission on the Space Shuttle Challenger Accident** United States. Managing in the public sector requires an understanding of the interaction between three distinct dimensions administrative structures organizational cultures and the skills of individual managers Public managers must produce results that citizens and their representatives expect from their government while fulfilling their constitutional responsibilities In *Public Management Thinking and Acting in Three Dimensions* authors Carolyn J Hill and Laurence E Lynn Jr argue that one size fits all approaches are inadequate for dealing with the distinctive challenges that public managers face Drawing on both theory and detailed case studies of actual practice the authors show how public management that is based on applying a three dimensional analytic framework structure culture and craft to specific management problems is the most effective way to improve the performance of America's unique scheme of governance in accordance with the rule of law The book educates readers to be informed citizens and prepares students to participate as professionals in the world of public management

Beyond Earth Charles Wohlforth, Amanda R. Hendrix, Ph.D., 2017-10-17 We are at the cusp of a golden age in space science as increasingly more entrepreneurs Elon Musk Richard Branson Jeff Bezos are seduced by the commercial potential of human access to space But *Beyond Earth* does not offer another wide eyed technology fantasy instead it is grounded not only in the human capacity for invention and the appeal of adventure but also in the bureaucratic political and scientific realities that present obstacles to space travel realities that have hampered NASA's efforts ever since the Challenger disaster In *Beyond Earth* the authors offer groundbreaking research and argue persuasively that not Mars but Titan a moon of Saturn

with a nitrogen atmosphere a weather cycle and an inexhaustible supply of cheap energy offers the most realistic and thrilling prospect of life without support from Earth

NASA's Space Shuttle Columbia, 2003 NASA's space shuttle Columbia broke apart on February 1, 2003, as it returned to Earth from a 16-day science mission. All seven astronauts aboard were killed. NASA created the Columbia Accident Investigation Board (CAIB), chaired by Admiral Harold Gehman, to investigate the accident. The Board released its report, available at <http://www.caib.us> on August 26, 2003, concluding that the tragedy was caused by technical and organizational failures. The CAIB report included 29 recommendations, 15 of which the Board specified must be completed before the shuttle returns to flight status. This report provides a brief synopsis of the Board's conclusions, recommendations, and observations. Further information on Columbia and issues for Congress are available in CRS Report RS21408. This report will not be updated.

The Challenger Launch Decision Diane Vaughan, 2016-01-04 An in-depth account of the events and personal actions which led to a great tragedy in the history of America's space program. James D. Smith, former Solid Rocket Booster Chief, NASA Marshall Space Flight Center. When the Space Shuttle Challenger exploded on January 28, 1986, millions of Americans became bound together in a single historic moment. Many still vividly remember exactly where they were and what they were doing when they heard about the tragedy. Diane Vaughan recreates the steps

leading up to that fateful decision contradicting conventional interpretations to prove that what occurred at NASA was not skullduggery or misconduct but a disastrous mistake Why did NASA managers who not only had all the information prior to the launch but also were warned against it decide to proceed In retelling how the decision unfolded through the eyes of the managers and the engineers Vaughan uncovers an incremental descent into poor judgment supported by a culture of high risk technology She reveals how and why NASA insiders when repeatedly faced with evidence that something was wrong normalized the deviance so that it became acceptable to them In a new preface Vaughan reveals the ramifications for this book and for her when a similar decision making process brought down NASA s Space Shuttle Columbia in 2003 Vaughn finds the traditional explanation of the Challenger accident to be profoundly unsatisfactory One by one she unravels the conclusions of the Rogers Commission The New York Times A landmark study Atlantic Vaughn gives us a rare view into the working level realities of NASA The cumulative force of her argument and evidence is compelling Scientific American
