

Trace materials, such as evidence from a crime scene, lead in paint or mercury in drinking water, can be identified by heating or burning the materials and examining the color(s) of light given off in the form of bright-line spectra.

Model 1 – White Light

- 1. Trace the arrows in Model 1 and shade in the table with colored pencils where appropriate.
- 2. What happens to white light when it passes through a prism?

it splits into a spectrum of colors

- 3. Why are the color labels in the table in Model 1 plural (i.e., "Reds" rather than "Red")?

because there are multiple shades of each color

- 4. Do all colors of light travel at the same speed?

yes the speed of light is the same no matter the color

- 5. Do all colors of light have the same energy? If no, which colors have the highest energy and the least energy, respectively?

warm colors have less energy cool colors have more

Light & Sound Edward P. Ortleb, Richard Cadice, 1993-09-01 Color overheads included This book presents a program of basic studies dealing with light and sound energy The sources and nature of light and sound are presented along with various characteristics of each phenomenon Topics include instruments that use and observe light and sound materials that affect light and sound and communication Each of the twelve teaching units in this book is introduced by a color transparency which emphasizes the basic concept of the unit and presents questions for discussion Reproducible student pages provide reinforcement and follow up activities The teaching guide offers descriptions of the basic concepts to be presented background information suggestions for enrichment activities and a complete answer key

The Physics of Heavy Light Col Parkes, 2016-04-21 This book is not a textbook or a reference book but is a technical book It attempts to provide simpler explanations for some strange light behaviour than existing theories provide It describes light behaviour in terms of more tangible concepts without the need for mysterious quantum physics or complicated mathematics It contains useful general information on the physics of light but only for background While there is an element of myth busting about this book I don't believe existing light theories are completely wrongsome are just incomplete or based on misinterpretations of observations Current light theory has been good enough to help us understand what we see from the edges the universe down to almost atomic scales and many levels in between But the explanation of what light really is and how it does what it does seems incomplete Will this book explain everything about light perhaps not But as you realise the significance of my light ideas on the science of the atom and the universe you may be surprised
