 Grigory D. Shirkov, Günter Zschornack, 2013-06-29 Presently many different types of ion sources exist worldwide for  
 producing highly charged ions The object of the present book is the treatment of electron impact ion sources like ECR  
 Electron Cyclotron Resonance ion sources EBIS Electron Beam Ion Sources EBIT Electron Beam Ion Trap and ERIS  
 Electron Ring Ion Sources which altogether are able to produce ions of high charge states This criterion delimits the book  
 according to classic ion sources which as a rule can deliver high currents of low charged ions In the last decades there has  
 been an intense development and building up of sources of highly charged ions The first impetus to the building of such  
 sources came from heavy ion accelerator centers since the effectiveness of a heavy ion accelerator is predominantly  
 determined by the available ion sources Thereby the critical criteria for the operation of an ion source are the charge state  
 distribution of the ions produced and the intensity of the extracted ion currents Besides the employment of sources of highly  
 charged ions in accelerator centers such sources increasingly are inserted separately from accelerators for basic  
 investigations in atomic physics surface physics and related areas     **Structure and Collisions of Ions and Atoms** I.A.  
 Sellin, 2012-12-06 The central subject of this volume is the atomic and molecular physics of heavy particles as investigated  
 with charged particle accelerators The natural division between atomic structure and ion atom collision studies and the  
 similar division between the theoretical and experimental branches of these subjects are reflected in a parallel subdivision  
 into corresponding chapters In addition one chapter is devoted to the important interface between atomic and molecular  
 physics with condensed matter physics A principal aim of the present volume is to provide a compact description of a  
 number of current interests and trends within the heavy particle structure and collisions field in a sufficiently general non  
 specialized way that interested scientists who wish to become acquainted with such interests and trends can do so without

becoming bogged down in excessive archival detail It is therefore hoped that the book will be of some use to advanced students who seek a general introduction to these subjects Numerous more specialized archival review articles are frequently referred to in each chapter for the benefit of those who seek more detailed knowledge about particular topics discussed The editor wishes to acknowledge the support of two U S government agencies the Office of Naval Research and the National Science Foundation during the preparation of this volume Sincere thanks are due Mrs Betty Thoe for her excellent editorial work on the various manuscripts and Mrs
