Borden, 2012-09-11 This remarkable undergraduate level text offers a study in calculus that simultaneously unifies the concepts of integration in Euclidean space while at the same time giving students an overview of other areas intimately related to mathematical analysis The author achieves this ambitious undertaking by shifting easily from one related subject to another Thus discussions of topology linear algebra and inequalities yield to examinations of innerproduct spaces Fourier series and the secret of Pythagoras Beginning with a look at sets and structures the text advances to such topics as limit and continuity in \mathbb{R}^n measure and integration differentiable mappings sequences and series applications of improper integrals and more Carefully chosen problems appear at the end of each chapter and this new edition features an additional appendix of tips and solutions for selected problems **Information Theory and Statistics** Solomon Kullback, 2012-09-11 Highly useful text studies logarithmic measures of information and their application to testing statistical hypotheses Includes numerous worked examples and problems References Glossary Appendix 1968 2nd revised edition *Pursuit Games* Otomar Hajek, 2008-01-01 A presentation of systematic methods for winning differential games of pursuit and evasion this volume explores the procedures scope and applications Numerous examples illustrate basic and advanced concepts including capture strategy and algebraic theory Detailed proofs appear throughout the text along with 200 exercises that further clarify each subject
