

Random mutations occur in populations all of the time. Mutations that produce variations (ie white fur instead of brown) sometimes help an organism ADAPT to its environment BETTER. Organisms that are better adapted are more likely to live and produce offspring. Eventually, this trait can take over a population.

- How does studying embryos give us clues to which organisms are most closely related? Give an example.

Embryos that have the most similarities throughout gestation are most likely more closely related. For example, the rabbit and the human are almost identical up until the third trimester.

- What is the difference between artificial and natural selection. Give examples of each.

Artificial is driven by humans while natural selection is driven by nature. Dogs are an example of artificial selection while wolves are an example of natural selection.

- Describe the bunny lab. What made the bunny population grow? Disappear? Change?

In the bunny lab, you could add mutations that enabled the bunnies to better adapt to their environments (ie food sources, habitat, predators). A favorable trait quickly replaced the less favorable one.

- Below is a phylogeny (tree of common ancestors):

- How are common ancestors indicated? **Intersecting lines.**
- Which organisms are most closely related? **Bear/Chimp**
- Which organisms are least related? **Lamprey/Chimp**
- Which organism is most closely related to a Lamprey? **Sunfish**

- What is the definition of a species?

A population of animals that can interbreed and produce fertile offspring.

- Are ligers, zorses, and mules considered their species? Why or why not?

No. They can mate but their offspring are sterile. You cannot breed two ligers and make more ligers.

- Define "niche" and "competition". Give examples of each.

A "niche" is the role or function of an organism in its environment. "Competition" is a negative interaction between organisms where they are competing for the same limited resource (ie food or shelter). Examples: a predator's "niche" is often to control prey populations. "Competition" occurs between tigers who occupy and hunt in overlapping territories.

- What is a vestigial trait? Give an example.

A trait that is no longer needed/used but was inherited from a common ancestor. Examples: wisdom teeth, appendix, facial hair, ear muscles, etc.

- What is the difference between analogous and homologous traits? Check all that are true.

Natural and Artificial Reasoning Tom Addis, 2014-10-20 What are the limitations of computer models and why do we still not have working models of people that are recognizably human This is the principle puzzle explored in this book where ideas behind systems that behave intelligently are described and different philosophical issues are touched upon The key to human behavior is taken to be intelligence and the ability to reason about the world A strong scientific approach is taken but first it was required to understand what a scientific approach could mean in the context of both natural and artificial systems A theory of intelligence is proposed that can be tested and developed in the light of experimental results The book illustrates that intelligence is much more than just behavior confined to a unique person or a single computer program within a fixed time frame Some answers are unraveled and some puzzles emerge from these investigations and experiments Natural and Artificial Reasoning provides a few steps of an exciting journey that began many centuries ago with the word why

Intrinsically Motivated Learning in Natural and Artificial Systems Gianluca Baldassarre, Marco Mirolli, 2013-03-29 It has become clear to researchers in robotics and adaptive behaviour that current approaches are yielding systems with limited autonomy and capacity for self improvement To learn autonomously and in a cumulative fashion is one of the hallmarks of intelligence and we know that higher mammals engage in exploratory activities that are not directed to pursue goals of immediate relevance for survival and reproduction but are instead driven by intrinsic motivations such as curiosity interest in novel stimuli or surprising events and interest in learning new behaviours The adaptive value of such intrinsically motivated activities lies in the fact that they allow the cumulative acquisition of knowledge and skills that can be used later to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans they underlie lifelong learning artistic creativity and scientific discovery while they are also the basis for processes that strongly affect human well being such as the sense of competence self determination and self esteem This book has two aims to present the state of the art in research on intrinsically motivated learning and to identify the related scientific and technological open challenges and most promising research directions The book introduces the concept of intrinsic motivation in artificial systems reviews the relevant literature offers insights from the neural and behavioural sciences and presents novel tools for research The book is organized into six parts the chapters in Part I give general overviews on the concept of intrinsic motivations their function and possible mechanisms for implementing them Parts II III and IV focus on three classes of intrinsic motivation mechanisms those based on predictors on novelty and on competence Part V discusses mechanisms that are complementary to intrinsic motivations and Part VI introduces tools and experimental frameworks for investigating intrinsic motivations The contributing authors are among the pioneers carrying out fundamental work on this topic drawn from related disciplines such as artificial intelligence robotics artificial life evolution machine learning developmental psychology cognitive science and neuroscience The book will be of value to graduate students and academic researchers in these domains and to

Holdaway, Duncan H. B. Irving, 2017-10-04 Leverage Big Data analytics methodologies to add value to geophysical and petrophysical exploration data Enhance Oil Gas Exploration with Data Driven Geophysical and Petrophysical Models demonstrates a new approach to geophysics and petrophysics data analysis using the latest methods drawn from Big Data Written by two geophysicists with a combined 30 years in the industry this book shows you how to leverage continually maturing computational intelligence to gain deeper insight from specific exploration data Case studies illustrate the value propositions of this alternative analytical workflow and in depth discussion addresses the many Big Data issues in geophysics and petrophysics From data collection and context through real world everyday applications this book provides an essential resource for anyone involved in oil and gas exploration Recent and continual advances in machine learning are driving a rapid increase in empirical modeling capabilities This book shows you how these new tools and methodologies can enhance geophysical and petrophysical data analysis increasing the value of your exploration data Apply data driven modeling concepts in a geophysical and petrophysical context Learn how to get more information out of models and simulations Add value to everyday tasks with the appropriate Big Data application Adjust methodology to suit diverse geophysical and petrophysical contexts Data driven modeling focuses on analyzing the total data within a system with the goal of uncovering connections between input and output without definitive knowledge of the system s physical behavior This multi faceted approach pushes the boundaries of conventional modeling and brings diverse fields of study together to apply new information and technology in new and more valuable ways Enhance Oil Gas Exploration with Data Driven Geophysical and Petrophysical Models takes you beyond traditional deterministic interpretation to the future of exploration data analysis

Intelligent Decision Making Through Bio-Inspired Optimization Jaganathan, Ramkumar, Mehta, Shilpa, Krishan, Ram, 2024-04-15 Academic scholars entrenched in the complexities of various domains face the daunting task of navigating intricate decision making scenarios The prevailing need for efficient and effective decision making tools becomes increasingly apparent as traditional methodologies struggle to keep pace with the demands of modern research and industry This pivotal issue necessitates a shift urging scholars to explore unconventional approaches that can transcend disciplinary boundaries and unlock new dimensions of problem solving In response to these pressing challenges *Intelligent Decision Making Through Bio Inspired Optimization* emerges as a beacon of ingenuity This groundbreaking book transcends usual disciplinary boundaries seamlessly integrating computer science artificial intelligence optimization and decision science Its multidisciplinary approach addresses the inherent complexities faced by scholars offering a comprehensive exploration of nature inspired algorithms such as genetic algorithms swarm intelligence and evolutionary strategies The book s core mission is to empower academic scholars with the tools to overcome contemporary decision making hurdles providing a holistic understanding of these bio inspired approaches and their potential to revolutionize the scholarly landscape

Drug Discovery and Design Using Natural Products Jorddy Neves Cruz, 2023-08-28 Historically natural products have great relevance for the development of new drugs Natural molecules in addition to directly providing new compounds with different therapeutic functions have provided scaffolds and a great diversity of structures that serve as inspiration for the design and discovery of new drugs The great structural complexity and the significant number of natural compounds that can be obtained and their advantages also present some historical problems that need to be overcome Issues such as difficulty in isolation difficulty in synthesizing compounds found in nature in the laboratory screening to evaluate the biological properties of these compounds and structural optimization to enhance the pharmacological properties of biomolecules are some of the main difficulties encountered in research with natural products and in the design discovery of new medicines Therefore this book addresses the great scientific advances that provide practical solutions to using natural products to develop new drugs We address topics related to the genesis of research projects that use natural products to design new drugs We address the discovery of new species initial processes for identification and extraction of compounds isolation and identification of these structures techniques and advances in vitro and in vivo methods that support the discovery of new natural drugs synthesis of new compounds from natural molecules in silico optimization processes of potentially promising compounds
