Gizmo Warm-up

During **photosynthesis**, plants use the energy of light to produce **glucose** ($C_6H_{12}O_6$) from **carbon dioxide** (CO_2), and water (H_2O). Glucose is a simple sugar that plants use for energy and as a building block for larger molecules.

A by-product of photosynthesis is oxygen. Plants use some of the oxygen they produce, but most of it is released. In the *Photosynthesis Lab* Gizmo, you can monitor the rate of photosynthesis by measuring oxygen production.

1. Observe the left pane closely. What do you think the bubbles are?

Oxygen

2. Select the BAR CHART tab. On the graph, notice the **Oxygen production** bar. Move the **Light intensity** slider back and forth. How does light intensity affect oxygen production?

It gives it more energy to photosynthesize.

3. Experiment with the vertical **Temperature** slider (upper left) and the **CO₂ level** slider.

A. How does temperature affect oxygen production?

More temperature, more oxygen.

B. How does CO₂ level affect oxygen production?

CO₂ gets changed into oxygen, the more CO₂ the more oxygen.

C. How does oxygen production relate to the rate of photosynthesis?

The more a plant photosynthesizes the

Learning by Mistake Emma Chiappetta, 2025-07-31 Mistakes aren't something to fear they're a powerful catalyst for learning. When students experience mistakes as opportunities rather than obstacles they participate more, think more creatively and develop resilience that extends far beyond the classroom. In *Learning by Mistake* veteran educator Emma Chiappetta reveals how mistakes prime the brain for deeper learning. Drawing on current neuroscience research and her own classroom experience Chiappetta provides 12 practical field-tested strategies that help build a positive mistake culture where errors are valued stepping stones to success. This accessible guide shows you how to: Create classroom environments where students feel safe to take intellectual risks; Phrase and deliver feedback in a way that builds student confidence; Design activities that normalize mistake-making and turn errors into learning opportunities; Help students analyze their mistakes and develop metacognitive skills; Transform assessment practices to celebrate growth rather than punish imperfection. From wrong answers only icebreakers to collaborative mistake analysis, mistake meetings and mistake journals, these ready-to-implement strategies work across all grade levels and subject areas. Whether you're working with apprehensive students to deepen their learning or simply looking to create a more supportive classroom culture *Learning by Mistake* provides the tools you need to turn mistake anxiety into curiosity and growth. *Digital Learning and Teaching in Chemistry* Yehudit

Dori, Courtney Ngai, Gabriela Szeinberg, 2023-07-12 Education is always evolving and most recently has shifted to increased online or remote learning. *Digital Learning and Teaching in Chemistry* compiles the established and emerging trends in this field specifically within the context of learning and teaching in chemistry. This book shares insights about five major themes: best practices for teaching and learning digitally; digital learning platforms; virtual visualisation and laboratory to promote learning in science; digital assessment and building communities of learners and educators. The authors are chemistry instructors and researchers from nine countries contributing an international perspective on digital learning and teaching in chemistry. While the chapters in this book span a wide variety of topics as a whole they focus on using technology and digital platforms as a method for supporting inclusive and meaningful learning. The best practices and recommendations shared by the authors are highly relevant for modern chemistry education as teaching and learning through digital methods is likely to persist. Furthermore, teaching chemistry digitally has the potential to bring greater equity to the field of chemistry education in terms of who has access to quality learning and this book will contribute to that goal. This book will be essential reading for those working in chemical education and teaching. Yehudit Judy Dori is internationally recognised, formerly Dean of the Faculty of Education of Science and Technology at the Technion Israel Institute of Technology and won the 2020 NARST Distinguished Contributions to Science Education through Research Award (DCRA) for her exceptional research contributions. Courtney Ngai and Gabriela Szeinberg are passionate researchers and practitioners in the education field. Courtney Ngai is the Associate Director of the Office of Undergraduate Research and Artistry at Colorado State University. Gabriela Szeinberg
