As time pass from the 2011 discovery of the revolutionary technology responsible for causing billions of fractures in the oil and gas shale barely a mile under the surface is not fully cleared yet. Studies show extreme toxic exposure from the use of fracking fluids making its way up and contaminating the ground water tables (the most common source of potable water), other research shows alarmingly high level of poison content in the air around open storage ponds sustaining airborne fumes evaporating from millions of gallons of highly poisonous hydraulic fluids recovered from each well (also leaking back into
