Starving in the Shadow of Plenty Ellen Levine, Loretta Schwartz-Nobel, 2001-05-31 President Ronald Reagan's chief advisor on domestic affairs announced in December 1980 that poverty has been virtually wiped out in the United States and the systems of government aid have been a brilliant success. Now *Starving in the Shadow of Plenty* lays bare the horrifying truth. For the first time since Robert Kennedy traveled the muddy back roads of Mississippi and the war on poverty rose and fell, starvation in America is documented. Loretta Schwartz Nobel, twice winner of the Robert Kennedy Memorial Award for articles on hunger, has retraced Kennedy's steps and found that Marasmus and Kwashiorkor, the most extreme diseases of protein and calorie deficiency, still exist in the United States today. The author spent seven years traveling across the country and speaking to the hungry in rural shacks, urban ghettos, on Indian reservations, and in previously middle-class homes. Her book is their story told in their own words. But it is also the story of federal corruption and abuse. The government of the United States turns countless numbers of eligible people away from existing food programs; it allows millions of infants to be malnourished and it seems to be oblivious to citizens who are starving and dying. *Starving in the Shadow of Plenty* is the first in a series on hunger in America. The author's newest book, *Growing Up Empty*, the voices and politics of starving children in America, a 25-year retrospective, will be published by Harper Collins/Cliff Street Books in 2002.

Bioactive Compounds from Multifarious Natural Foods for Human Health Hafiz Ansar Rasul Suleria, Megh R. Goyal, Huma Bader Ul Ain, 2022-08-01 Divided into two sections, the volume first examines health claims of food-based bioactive compounds, which are extra-nutritional constituents that typically occur in small quantities in foods. This section lays out the concepts of extraction of food-based bioactive molecules along with both conventional and modernized extraction techniques. The book goes to present new research on health claims of bioactive compounds from medicinal plants, their importance, and health perspectives. Both sections cover the various pharmacological and therapeutic aspects of bioactive compounds along with their methods of extraction, their phytochemistry, their pharmacological and biological activities, their medicinal properties, and their applications for disease management and prevention. This volume sheds new light on the potential of natural and plant-based foods for human health from different technological aspects contributing to the ocean of knowledge on food science and technology.

Cultivated Meat Carlos Ricardo Soccol, Carla Forte Maiolino Molento, Germano Glufke Reis, Susan Grace Karp, 2024-06-05 Cultivated meat is an emerging substitute for conventional meat that is not associated with animal farming and slaughtering. Instead, animal cells are cultivated in bioreactors and post-processed into artificial meat products. Although this new technology solves several ethical and environmental problems, there are techno-economic challenges that need to be addressed to make the commercial-scale production of cultivated meat a real perspective. This book addresses fundamental aspects of new food systems: animal cell culture and cultivated meat production, including cell lines, culture media, microcarriers, and scaffolds.
