All integers are rational numbers.

Irrational Number ... a number that cannot be expressed as a ratio between two integers. It neither is decimal notation, an irrational number would have an infinite number of digits to the right of the decimal point, without repeating. The value of π (3.14159...) and the square root of 2 ($\sqrt{2}$) are examples of irrational numbers.

Real Number ... (also called measuring numbers); any rational or irrational number; each of the infinite number of points on the real number line represents a real number. This includes all numbers that can be written as a decimal and fractions is also in decimal form.
