Marine Mammal Ecotoxicology Maria Cristina Fossi, Cristina Panti, 2018-08-06 *Marine Mammal Ecotoxicology Impacts of Multiple Stressors on Population Health* provides tactics on how to develop a comprehensive methodology for the study of existing threats to marine mammals. By presenting a conservation biology approach and new and emerging technologies, this work helps provide crucial knowledge on the status of marine mammal populations that not only helps readers understand the ecosystem's health but also instigate mitigation measures. This volume provides information that helps investigators unravel the relationships between exposure to environmental stressors (e.g. climate change, pollutants, marine litter, pathogens and biotoxins) and a range of endpoints in marine mammal species. The application of robust examination procedures and biochemical, immunological and molecular techniques combined with pathological examination and feeding ecology has led to the development of health assessment methods at the individual and population levels in wild marine mammals. Provides a comprehensive worldwide update and state of knowledge on current research and topics on marine mammal ecotoxicology. Includes coverage of both new and emerging technologies. Features a multidisciplinary approach that gives readers a broad updated overview of the threats facing marine mammals and related conservation measures **Pediatric Nephrology** Ellis D. Avner, William E. Harmon, Patrick Niaudet, Norishige Yoshikawa, 2009-08-20 Here is an extensive update of Pediatric Nephrology which has become the standard reference text in the field. Modern Visualisation of the Endothelium J M Polak, 1998-07-16 There can no longer be any doubt that the endothelium represents a very active tissue and is not as had previously been thought merely an inert lining material On the contrary the endothelium exerts a powerful influence on its environs through the release of multiple regulatory factors such as nitric oxide endothelium derived hyperpolarizing factor and endothelin It is therefore crucial to our understanding of the cardiovascular system that we are able to visualize the endothelial layer at the molecular level Quantitative morphological studies permit visualization at this level allowing the assessment of the changes that occur in the disease state Modern methods of computerized image analysis have been applied to reconstruct the endothelial layer in three dimensions detecting even the most subtle of changes Within these covers an integrated text has been gathered by experts in each of their fields They detail the latest technical and conceptual advances in the visualization of endothelium its production of regulatory molecules and pathological changes
